NEET BIOLOGY

ENVIRONMENTAL ISSUES

1.	Catalytic converters are fitted into automobiles to reduce the emission of harmful gases. Catalytic converters changes unburnt hydrocarbons into				
	0	ocarbons into			
	a) Carbon dioxide and water		b) Carbon monoxide	.1	
	c) Methane		d) Carbon dioxide and me		
2.	What percentage of total area in h	illy regions does th	ie National Forest Policy (1	988) suggest to be under	
	forests?				
	a) 67% b) 33%		c) 64%	d) 34%	
3.	Increase the atmospheric tempera	=			
	a) Pasteur effect b) Gree	en house effect	c) Blackman effect	d) Emerson effect	
4.	Which one of following is not an a	ir pollutant?			
	a) Pollen from plants b) phos	sphates	c) Carbon monoxide	d) Hydrocarbon	
5.	DDT residues are rapidly passed t	hrough food chain	causing biomagnifications	because DDT is	
	a) Lipo soluble		b) Moderately toxic		
	c) Non-toxic to aquatic animals		d) Water soluble		
6.	Rain is called acid rain when its pl	H is below			
	a) 7 b) 6.5		c) 6	d) 5.6	
7.	CFCs are responsible for				
	a) Ozone layer depletion		b) Global warming		
	c) Acid rain		d) None of these		
8.	Acid rain is due to		,		
		and NO ₂	c) SO_2 and NO_2	d) SO_2 and N_2O	
9.	Noise is	2	-) 2 2	-) <u>2</u> - <u>2</u> -	
	a) Loud sound		b) Sound of high frequence	.V	
	c) Unwanted sound		d) Constant sound	5	
10	-	nts like nitrogen an	•	l phosphorus which favours the excessive growth of	
101	planktonic (free floating) algae wi	-		_	
		nagnification	c) Eutrophication	d) Both (a) and (c)	
11.	, ,	•	, ,		
11.	a) Open dumping	e managea m wine	b) Composting		
	c) Incineration		d) Dumping in sealed containers		
12	Polyblend is mixed withA to la	wroads in R (, , ,		
12.	option for A and B	ay 10aus 111DC	iompiete the given stateme	in by choosing appropriate	
	-		h) A contrar D Delle:		
	a) A-bitumen; B-Bengaluru		b) A-carbon; B-Delhi		
10	c) A-plastic; B-Kolkata	6	d) A-cement; B-Chennai		
13.	Most hazardous metal pollutant o				
	a) Cadmium b) Lead		c) Mercury	d) Copper	
14.	Which one of the following is main	ily responsible for	-		
	a) SO_2 b) CO_2		c) CO	d) 0 ₂	
15.	Which one of the following pairs i				
	a) Biomass burning Release	=	b) Fossil fuel burning	—	
	c) Nuclear power Radioact		d) Solar energy G	reen house effect	
16.	Consider the following statements	5			

	I. Soil without a vegetation cover is eroded by both wind and water			
	II. Excessive irrigation results in water logging of soil			
	III. Increased salt concentration damages agriculture	e		
	Which of the statements given above are correct?			
4 5	a) I and II b) I and III	c) II and III	d) I, II and III	
17.	In India, the Air Prevention and Control of pollution	Act came into force inA	, but was amended inB	
	to includeC as an air pollutant			
	Complete the given statement by choosing appropria	-		
	a) A-1980, B-1986, C-water	b) A-1981, B-1987, C-nc		
10	c) A-1982, B-1988, C-radioactive	d) A-1983, B-1989, C-so		
18.	Which method is used to remove particulate matter	=	rmal power plant?	
	a) Wet scrubbers	b) Absorption		
10	c) Electrostatic precipitator	d) Gravitational method		
19.	Restoring a forest cover over an area where one exis	sted earlier but was remo	ved at some point of time in	
	the past is called	a) Defensetation	d) None of these	
20	a) Reforestation b) Afforestation		d) None of these	
20.	For the control of air pollution in Delhi, all buses of I B as per the directives of theC	Jeim were converted to n	un onA by the end of	
	Complete the given statement by choosing appropria	ata antiana far A. C		
	a) A-compressed natural gas, B-2000, C-High Court	ate options for A-C		
	b) A-Shale gas, B-2001, C-Central Government			
	c) A-compressed natural gas, B-2002, C-Supreme Co	nirt		
	d) A-Liquid pressure gas compressed natural gas, B-2002, C-Supreme CC		at a state of the	
21	Green house gases are		it .	
21.	a) CFCs, CO_2NH_4 and NO_2			
	b) O_2 , N_2 and NO_2			
	c) N_2, CO_2 and NH_4			
	d) None of the above			
22.	In which state of India, Ecosave toilets are not found	?		
	a) Kerala b) Delhi		d) None of these	
23.	Identify the correctly matched pair.			
	a) Montreal protocol - Global warming	b) Kyoto protocol -	Climate change	
	c) Ramsar convention - Ground water pollution	d) Basal convention -	Biodiversity conservation	
24.	Study carefully the following pie diagram representi	ing the relative contributi	on of various greenhouse	
	gases to total global warming. Identify the gases A, B	B, C and D		
	6%			
	14%			
	A +60%			
	20% - B			
	$(A \times A \times$		$EC_{c} D = N O$	
	a) $A - N_2 O, B - CO_2, C - CH_4, D - CFCs$ c) $A - CH_4 - B - CFCs - C - N_4 - O - D - CO_4$	b) A-CO ₂ , B – CH ₄ , C – C	—	
25	c) A-CH ₄ , , B – CFCs, C – N ₂ O, D – CO ₂ The main cause of pollution is metrosities is	d) A-CFCs, , B – N ₂ O, C –	$- U_2, D - U_4$	
25.	The main cause of pollution is metrocities is a) Burning of fossil fuels			
	b) Water plants			
	c) Domestic products			
	d) None of these			
	uj nolle ol ulese			

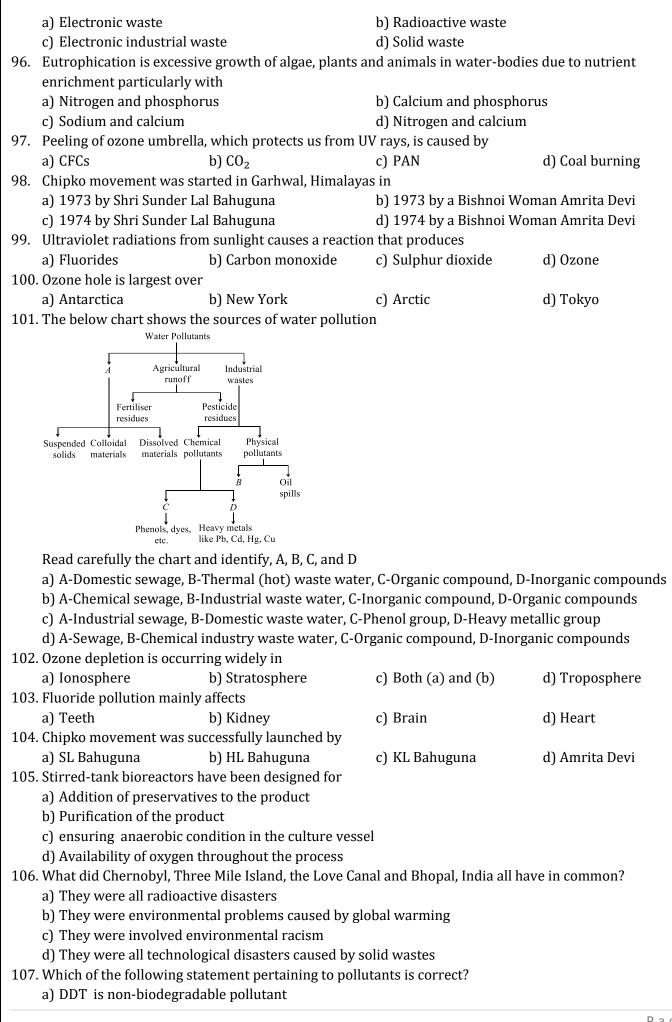

20.	Chipko movement (1974) is the world's known eco development programme, started by Sunder Lal Bahuguna in Tehri Garhwal (Uttarakhand). It is associated with		
~ -	a) Plant conservation b) Deforestation	c) Reforestation	d) Afforestation
27. Which one of the following is a most efficient device to eliminate particulate matters from the			atters from the industrial
	emissions?	h) Trainstowy concreters	
	a) Cyclonic separators c) Pyrolysis	b) Trajectory separatorsd) Electrostatic precipita	
28	Kyoto protocol is related with	uj Licci ostatic precipita	itor
20.	a) Ozone layer depletion		
	b) Green house effect		
	c) Water pollution		
	d) Conservation of wildlife		
29.	is an undesirable change in physical, chemical	or biological characteristic	s of air, land, water or soil
	a) Pollution	b) Ecological disturbance	e
	c) Ecological deterioration	d) Adulteration	
30.	For the best ecological balance, land mass of a coun		
	a) 23% b) 33%	c) 44%	d) 35%
31.	Desertification has become a major problem due to		
	a) Decreased natural resources	b) Increased urbanizatio	n
22	c) Increased population	d) All of the above	
32.	Why CNG is considered as good fuel over diesel/pet		
	I. CNG burns most efficiently without leaving any un II. CNG is cheaper than petrol or diesel	ibui ili reinnant bennu	
	III. CNG cannot be siphoned off by thieves and adult	arated like netrol or diesel	
	Which of the statements given above are correct?	erated like petrol of dieser	
	a) I and II b) I and III	c) II and III	d) I, II and III
33.	Eutrophicated lake has BOD	-)	
	Luti opinicateu lake nas DOD		
	a) Lower		
	-		
	a) Lower		
	a) Lowerb) Higherc) Dependent on climated) May be lower or higher		
	 a) Lower b) Higher c) Dependent on climate d) May be lower or higher A sewage treatment process, in which a portion of t 	he decomposer bacteria pr	esent in the waste is
	 a) Lower b) Higher c) Dependent on climate d) May be lower or higher A sewage treatment process, in which a portion of the recycled into the beginning of the process, is called 		esent in the waste is
	 a) Lower b) Higher c) Dependent on climate d) May be lower or higher A sewage treatment process, in which a portion of the recycled into the beginning of the process, is called a) Cyclic treatment 	b) Primary treatment	esent in the waste is
34.	 a) Lower b) Higher c) Dependent on climate d) May be lower or higher A sewage treatment process, in which a portion of the recycled into the beginning of the process, is called a) Cyclic treatment c) Activated sludge treatment 	b) Primary treatment d) Tertiary treatment	
34.	 a) Lower b) Higher c) Dependent on climate d) May be lower or higher A sewage treatment process, in which a portion of the recycled into the beginning of the process, is called a) Cyclic treatment c) Activated sludge treatment Consider the following statements about harmful effects 	b) Primary treatment d) Tertiary treatment fects of radioactive pollutio	
34.	 a) Lower b) Higher c) Dependent on climate d) May be lower or higher A sewage treatment process, in which a portion of the recycled into the beginning of the process, is called a) Cyclic treatment c) Activated sludge treatment Consider the following statements about harmful efficiency of the statement of th	b) Primary treatment d) Tertiary treatment fects of radioactive pollutio	
34.	 a) Lower b) Higher c) Dependent on climate d) May be lower or higher A sewage treatment process, in which a portion of the recycled into the beginning of the process, is called a) Cyclic treatment c) Activated sludge treatment Consider the following statements about harmful efficients I. Radiations from nuclear wastes causes mutation at II. At high doses, nuclear radiations are lethal 	b) Primary treatment d) Tertiary treatment fects of radioactive pollution at a very high rate	
34.	 a) Lower b) Higher c) Dependent on climate d) May be lower or higher A sewage treatment process, in which a portion of the recycled into the beginning of the process, is called a) Cyclic treatment c) Activated sludge treatment Consider the following statements about harmful efficiency from nuclear wastes causes mutation at II. At high doses, nuclear radiations are lethal III. At low doses, radiations cause disorders and car 	b) Primary treatment d) Tertiary treatment fects of radioactive pollution at a very high rate	
34.	 a) Lower b) Higher c) Dependent on climate d) May be lower or higher A sewage treatment process, in which a portion of the recycled into the beginning of the process, is called a) Cyclic treatment c) Activated sludge treatment Consider the following statements about harmful efficients I. Radiations from nuclear wastes causes mutation at II. At high doses, nuclear radiations are lethal 	b) Primary treatment d) Tertiary treatment fects of radioactive pollution at a very high rate	
34. 35.	 a) Lower b) Higher c) Dependent on climate d) May be lower or higher A sewage treatment process, in which a portion of the recycled into the beginning of the process, is called a) Cyclic treatment c) Activated sludge treatment Consider the following statements about harmful efficient of the following statements about harmful efficient of the following statements about harmful efficient of the following statements are lethal III. At high doses, radiations cause disorders and car Which of the statements given above are correct? 	 b) Primary treatment d) Tertiary treatment a fects of radioactive pollution at a very high rate acer c) II and III 	on
34. 35.	 a) Lower b) Higher c) Dependent on climate d) May be lower or higher A sewage treatment process, in which a portion of the recycled into the beginning of the process, is called a) Cyclic treatment c) Activated sludge treatment Consider the following statements about harmful efficiency (a) and the following statements are lethed II. At high doses, nuclear radiations are lethed III. At low doses, radiations cause disorders and care (b) I and III 	 b) Primary treatment d) Tertiary treatment a fects of radioactive pollution at a very high rate acer c) II and III 	on
34. 35. 36.	 a) Lower b) Higher c) Dependent on climate d) May be lower or higher A sewage treatment process, in which a portion of the recycled into the beginning of the process, is called a) Cyclic treatment c) Activated sludge treatment Consider the following statements about harmful efficient of the following statements about harmful efficient of the distribution of the statements given above are correct? a) I and II b) I and III c) According to research, the concentration 	 b) Primary treatment d) Tertiary treatment fects of radioactive pollution at a very high rate c) II and III n of CFC_sreached to c) 261 ppt 	on d) All of these d) 326 ppb
34. 35. 36.	 a) Lower b) Higher c) Dependent on climate d) May be lower or higher A sewage treatment process, in which a portion of the recycled into the beginning of the process, is called a) Cyclic treatment c) Activated sludge treatment Consider the following statements about harmful eff. I. Radiations from nuclear wastes causes mutation at II. At high doses, nuclear radiations are lethal III. At low doses, radiations cause disorders and car Which of the statements given above are correct? a) I and II b) I and III In 2002 AD, according to research, the concentration at 368 ppm b) 1750 ppb Photochemical smog formed in congested metropolication at a statement of the stateme	 b) Primary treatment d) Tertiary treatment fects of radioactive pollution at a very high rate at a very high rate c) II and III n of CFC_s reached to c) 261 ppt itan cities mainly consist o b) Smoke, peroxyacetyl r 	on d) All of these d) 326 ppb f nitrate and SO ₂
34.35.36.37.	 a) Lower b) Higher c) Dependent on climate d) May be lower or higher A sewage treatment process, in which a portion of the recycled into the beginning of the process, is called a) Cyclic treatment c) Activated sludge treatment Consider the following statements about harmful efficiency (and the following statements about ha	 b) Primary treatment d) Tertiary treatment fects of radioactive pollution at a very high rate at a very high rate c) II and III n of CFC_s reached to c) 261 ppt itan cities mainly consist o b) Smoke, peroxyacetyl r d) Hydrocarbon, ozone a 	on d) All of these d) 326 ppb f nitrate and SO_2 and SO_2
34.35.36.37.	 a) Lower b) Higher c) Dependent on climate d) May be lower or higher A sewage treatment process, in which a portion of the recycled into the beginning of the process, is called a) Cyclic treatment c) Activated sludge treatment c) Activated sludge treatment Consider the following statements about harmful eff. I. Radiations from nuclear wastes causes mutation at II. At high doses, nuclear radiations are lethal III. At low doses, radiations cause disorders and car Which of the statements given above are correct? a) I and II b) I and III In 2002 AD, according to research, the concentration a) 368 ppm b) 1750 ppb Photochemical smog formed in congested metropole a) Ozone, peroxyacetyl nitrate and NOx c) Hydrocarbon, SO2 and CO2 If there is no greenhouse effect, the average temper 	 b) Primary treatment d) Tertiary treatment fects of radioactive pollution at a very high rate at a very high rate c) II and III n of CFC_s reached to c) 261 ppt itan cities mainly consist o b) Smoke, peroxyacetyl r d) Hydrocarbon , ozone a ature at the surface of eart 	on d) All of these d) 326 ppb f nitrate and SO ₂ and SO ₂ h would have been
34.35.36.37.38.	a) Lower b) Higher c) Dependent on climate d) May be lower or higher A sewage treatment process, in which a portion of t recycled into the beginning of the process, is called a) Cyclic treatment c) Activated sludge treatment Consider the following statements about harmful efficient I. Radiations from nuclear wastes causes mutation a II. At high doses, nuclear radiations are lethal III. At low doses, radiations cause disorders and car Which of the statements given above are correct? a) I and II b) I and III In 2002 AD, according to research, the concentration a) 368 ppm b) 1750 ppb Photochemical smog formed in congested metropol a) Ozone, peroxyacetyl nitrate and NO_x c) Hydrocarbon, SO_2 and CO_2 If there is no greenhouse effect, the average temper a) 15° C b) -18° C	 b) Primary treatment d) Tertiary treatment fects of radioactive pollution at a very high rate at a very high rate c) II and III n of CFC_s reached to c) 261 ppt itan cities mainly consist o b) Smoke, peroxyacetyl r d) Hydrocarbon , ozone a ature at the surface of eart c) -6°C 	bn d) All of these d) 326 ppb f nitrate and SO_2 and SO_2 h would have been d) 20°C
34.35.36.37.38.	 a) Lower b) Higher c) Dependent on climate d) May be lower or higher A sewage treatment process, in which a portion of the recycled into the beginning of the process, is called a) Cyclic treatment c) Activated sludge treatment c) Activated sludge treatment Consider the following statements about harmful eff. I. Radiations from nuclear wastes causes mutation at II. At high doses, nuclear radiations are lethal III. At low doses, radiations cause disorders and car Which of the statements given above are correct? a) I and II b) I and III In 2002 AD, according to research, the concentration a) 368 ppm b) 1750 ppb Photochemical smog formed in congested metropole a) Ozone, peroxyacetyl nitrate and NOx c) Hydrocarbon, SO2 and CO2 If there is no greenhouse effect, the average temper 	 b) Primary treatment d) Tertiary treatment fects of radioactive pollution at a very high rate at a very high rate c) II and III n of CFC_s reached to c) 261 ppt itan cities mainly consist o b) Smoke, peroxyacetyl r d) Hydrocarbon , ozone a ature at the surface of eart c) -6°C 	bn d) All of these d) 326 ppb f nitrate and SO_2 and SO_2 h would have been d) 20°C

40.	a) Bright's disease b) Minamata disease The cause of decline in the population of reptiles and		d) Osteosclerosis
10.	a) DDT b) Biofertilizer	c) Bioinsecticides	d) Sewage
41.	Consider the following statements regarding defore	station	
	I. It is removal, decrease or deterioration of forest co	over of an area	
	II. It leads to soil erosion		
	III. Deforestation often causes flash floods		
	IV. Deforested area can be used variously as croplan	d, industrial area, residenti	al area, fallow land, etc.
	Which of the statements given above are correct?		
	a) I, II and III b) II, III and IV	c) I, III and IV	d) I, II, III and IV
42.	Increase in concentration of a toxicant at successive	-	
	a) Eutrophication	b) Accelerated eutrophica	
10	c) biomagnification	d) Cultural eutrophication	
43.	In the town of Arcata situated on northern coast of . was developed with the help of biologists fromB	-	vater treatment process
	a) A-Florida; B-Barry University	b) A-California; B-Humbo	ldt State University
	c) A-Florida; B-Abilence Christian University	d) A-California; B-Becker	-
44.	Secondary sewage treatment is mainly a		
	a) Mechanical process b) Chemical process	c) Biological process	d) Physical process
45.	Which of the following diseases is related to cadmiu	m pollution?	
	a) Minamata b) Pneumoconiosis	c) Anaemia	d) Itai-itai
46.	Shell of egg in bird becomes thin (not properly form	ed) due to the pollution of	pesticides. This occurs due
	to disturbed		
	a) Calcium metabolism	b) Phosphorus metabolis	
. –	c) Sodium metabolism	d) Potassium metabolism	
47.	Which of the following are the main harmful effects		
	I. Increase in carbon dioxide concentration in atmos	pnere	
	II. Loss of biodiversity due to habitat destruction III. Disturbance in hydrologic cycle		
	IV. Desertification		
	Which of the statements given above are correct?		
	a) I, II and III b) II, III and IV	c) I, III and IV	d) I, II, III and IV
48.	Study the following statements regarding Ecosave to		=
	a) They are working in Shri Lanka and Kerala		
	b) Composting method for recycling of human excre	ta	
	c) Recycled materials forms natural fertilisers		
	d) Enhance the need for chemical fertilisers		
49.	The atmosphere around earth is warmed because		
	a) Warm air cannot escape, as in a greenhouse		
	b) Molecules in the atmosphere are warmed by radi	ation from earth and retain	that heat
	c) Fossil fuels release heat		
50	d) Plants release CO ₂ Which of the following is not used for disinfection of	f drinking water?	
50.	a) Phenyl b) Chloramines	c) Chlorine	d) Ozone
51.	Earth's climate	c) difforme	aj ozone
	a) Has been stable over the history of the planet		
	b) Is changing as a result of natural and human proc	esses	
	c) Will stabilize over the next century, according to	the predictions of most scie	entists
	d) Has been documented to have changed once due	to the evolution of green pl	notosynthesizing plants
52.	Jhum cultivation refers to		

			b) Cultivation of medicin	_	
	c) Tribal methods of shif	-	d) Cultivation of timber plants		
53.	Which of the following is				
	a) Water vapour	b) Carbon monoxide	c) Methane	d) Oxygen	
54.	Minamata occurs in				
	a) Japan	b) Australia	c) India	d) China	
55.		=	e population of birds declin		
	a) Snake were feeding ex	•	b) Many of the birds eggs	s laid, did not hatch	
	c) Bird stopped laying eg	-	d) None of the above		
56.		st Management (JFM) invo			
	 a) Work in close association with the local communities for protecting and managing forests on mutua benefits 				
	b) Conservation of forest	and agricultural land by th	ne NGOs		
	c) Conservation of forest	and agricultural land by th	ne state government		
	d) Conservation of forest	and agricultural land by th	ne local communities		
57.	According to Kyoto proto	col, the major nations abid	le to reduce concentration o	of green –house gases by	
	a) 2008	b) 2010	c) 2012	d) 2018	
58.	This pollutant causes bur	ning sensation of throat ar	nd eyes and vomiting sensa	tion.	
	a) Hydrogen sulphide	b) Sulphur	c) Hydrogen cyanide	d) Arsenic substances	
59.	Drinking of mineral wate	r with very low level of pe	sticides (about 0.02 ppm) f	or long periods may	
	a) Produce immunity aga	inst mosquito			
		od cancer) in most people			
	c) Cause cancer of the intestine				
		of pesticide residues in boo	ly fat		
60.	The major goal of the gre	=			
	a) Decrease the use of me				
	b) Decrease population g				
	c) Increase agricultural production				
	d) Increase population g				
61.	In scrubber, the exhaust				
	a) Spray of water	b) Spray of time	c) Both (a) and (b)	d) Spray of hot water	
62.	During day time, sound le	evel is silent zone is			
	a) 50 dB	b) 70 dB	c) 20 dB	d) 30 dB	
63.	In India, Jhum cultivation	is practiced mainly in	,		
	a) North eastern states o		b) Western ghats of India	1	
	c) Gangetic plains		d) Deccan plateau		
64.	, , ,	on of environment due to h	uman activities is termed a	S	
	a) Ecological disturbance) ,	b) Catastrophe		
	c) Ecological degradation		d) Pollution		
65.	, , ,		s, because they can absorb		
	a) Ultraviolet radiation	0 0	b) Long wave infra-red ra	adiation	
	c) Visible light radiation		d) X-rays radiation		
66.		ng is a correct option with	reference to pathogenic bac	cteria and DDT?	
		multiplication and DDT is c			
		-	can not be degraded by livi	ing cells.	
			d DDT can be degraded by	-	
			d DDT can not be degraded	-	
67.	Expanded from of BOD is			, , , , , , , , , , , , , , , , , , , ,	
	a) Biochemical Oxygen D		b) Biosynthetic Oxygen D	Demand	
	c) Biogeochemical Oxyge		d) Biological Oxygen Dim		
	,		, <u></u>		

68.	Relative Biological Effectiveness (RBE) usually refer				
60	a) Low temperature b) High temperature	c) Radiation	d) Pollution		
69.	 Consider the following statements about pollution I. Pollution is an undesirable change in physical, chemical or biological characteristics of air, land, w 				
	eristics of air, land, water or				
	II. The air act was amendid in 1987 to include noise III. In order to control environmental pollution, the		assed the environment		
	Protection Act, 1976 to protect and improve the qua	=	issed the chivit officient		
	Which of the statements given above are correct?	inty of our christianient			
	a) I and II b) I and III	c) II and III	d) I, II and III		
70	The possible beneficial aspect of grazing animals is	•	aj i, ii ana iii		
,	a) Removal of wild animals and pests	b) Eradication of weeds			
	c) Removal of wild plants	d) Addition of their excre	ta into the soil		
71.	Ozone hole results in				
	a) UV radiation reaches the earth	b) Cataract			
	c) Increase in skin cancer	d) All of the above			
72.	Given below a set of health problems	,			
	I. lack of sleep				
	II. high blood pressure				
	III. stress				
	IV. complete or partial hearing				
	V. anxiety				
	Which of the health problems given above are cause	d by noise pollution?			
	a) I, II and III b) II, III and IV	c) II, III, IV and V	d) I, II, III, IV and V		
73.	The intensity levels of whispering noise is				
	a) 10-15 dB b) 20-40 dB	c) 45-50 dB	d) 50-55 dB		
74.	Which of the following process is a cyclic, zero-wast	e procedure where waste p	products from one process		
	are cycled in as nutrients for other processes, allow	ng maximum utilisation of	resources and increasing		
	the efficiency of production?				
	a) Natural farming b) Organic farming	c) Chemical farming	d) Artificial farming		
75.	The main component of photochemical smog is				
	a) SO ₂ b) PAN	c) 0 ₃	d) Both (b) and (c)		
76.	The soil pollutants that affect the food chain and foo		=		
	a) Nitrogen oxides b) Pathogens	c) Chemical fertilizers	d) Pesticides		
77.	In acid rain, SO_2 accounts by		1) 0.00/		
70	a) 70% b) 100%	c) 50%	d) 30%		
78.	According to the Central Pollution Control Board (C harm to human health are of diameter	PCB), particles that are res	ponsible for causing great		
		-) 10.00 ····; ······	d) 7 5;		
70	a) 2.50 micrometers b) 5.00 micrometers	c) 10.00 micrometers	d) 7.5 micrometers		
79.	Which of the following are the causes for deforestat I. Human settlements	1011 :			
	II. Forest fires				
	III. Hydroelectric projects				
	IV. Overgrazing by livestock				
	V. Demand of wood				
	Which of the statements given above are correct?				
	a) I, II and III b) III, IV and V	c) II, III, IV and V	d) I, II, III, IV and V		
80.	BOD is concerned with	, , ,,	, , , <u>,</u>		
	a) Microbes	b) Organic matter			
	c) Microbes and organic matter	d) None of the above			
	-				

81.	In electrostatic precipitator, electrode wires are provided with an electric current of several thousand volts, which produces a corona that releaseA These electron attach to dust particle and given them aB charge within a very small fraction of a				
	second. Here A and B re	efers to			
	a) A-electron; B-positiv	e	b) A-neutron; B-negativ	e	
	c) A-electron; B-negativ	7e	d) A-proton; B-positive		
82.	Cutting of trees in a fore	est is called			
	a) Reforestation	b) Afforestation	c) Deforestation	d) None of these	
83.	The gradual continuous concentration of CO_2 ar	s increase in average temper	rature of surface of the ear	th as a result of increase in	
		b) Greenhouse effect	c) Ozone degradation	d) Montreal protocol	
84		ving is a major pollutant of a		uj Monti cai protocor	
04.	a) Carbon monoxide		c) Oxides of sulphur	d) Carbon dioxide	
85	•	are the example of industria		u) carbon uloxide	
05.	a) Scraps	are the example of mutistria	b) Flyash		
	c) Both (a) and (b)		d) Irreparable compute	rs	
86		ws electrostatic precipitato	<i>,</i>		
00.	4		Then the set of the se	leet the correct option	
	Dirty air $\xrightarrow{\circ \circ \circ \circ}_{\circ \circ} \xrightarrow{\circ}_{\circ \circ} \xrightarrow{\circ}_{\circ} \xrightarrow{\circ}_{\circ}$				
	a) A-Dust particle. B-Ne	egatively charged wire, C-Dis	scharge corona, D-Collectio	on plate grounded	
		B-Collection plate grounded	-		
		B-Negatively charged wire,			
		B-Dust particle, C-Negativel	-		
87.	World most problemati		,	F 8	
-	a) <i>Azolla</i>	b) <i>Wolffia</i>	c) <i>Eichhornia</i>	d) <i>Trapa</i>	
88.	Solid waste can be	,	,	5 1	
		b) Non-biodegradable	c) Both (a) and (b)	d) None of these	
89.				ately draining into lake firstly	
	affects	,			
	a) Growth of aquatic or	ganisms in lake	b) Eutrophication of lak	e	
	c) The environment of	-		osited on the lake bottom	
90.	Biomagnification is high				
	a) Producers		b) Primary consumers		
	c) Secondary consumer	S	d) Decomposers		
91.	Ozone (0_3) depletion is		· ·		
	a) PAN	b) NO _x	c) CFCs	d) Sulphates	
92.	Polyblend	· · ·	-		
	a) Enhance the bitumer	n's water repellant propertie	es		
	b) Helps to increase the	e life of road			
	c) Both (a) and (b)				
	d) Is a type of magnet w	which improve blood circulat	tion when applied in huma	n body part	
93.	The ozone layer is foun	-			
	a) Troposphere	b) Mesosphere	c) Stratosphere	d) Atmosphere	
94.	, , ,	health problem originates d	<i>,</i> 1	2	
	a) Irritation	_ 0	b) Inflammation		
	c) Damage of lungs and	premature deaths	d) Eunuchoidism		
95.		and other electronic goods a	•		
	•				

=	lrinking water causes osteop		
	drinking water causes black		
	water may cause 'Itai-Itai' di		
	to automobiles for reducing t		-
a) Catalytic converter	'S	b) Electrostatic precipita	tor
c) Scrubber		d) Bag filter	
	vildlife protection award is g		
a) Rural areas	b) Urban areas	c) NGOs	d) Hilly areas
	g are the indicators of polluti		d) Nama af thana
a) Lichen	b) Fungi	c) Algae	d) None of these
a) Hydrocarbons	utants, enzymatic filters are b) Lead	c) Nitrogen pollutants	d) Chloride pollutants
112. What is the major cau		cj Millogen ponulants	u) chioride politicalits
a) Urbanization	b) Greenhouse effect	c) El Nino effect	d) Both (a) and (c)
113. ESP is to arrest	b) dicemiouse enect	cj El Milo chect	u) both (a) and (c)
	b) Air pollution	c) Radioactive pollution	d) Soil pollution
114. Which are sensitive to		ej hadioactive politicion	a) bon ponation
a) Mosses		c) Lichen	d) Ferns
115. Reforestation is usefu	, 0	-)	
a) Increasing the ferti		b) Reducing floods	
	sion and spread of deserts	d) All of the above	
	g metals is a water pollutant	,	n being?
a) As	b) Mn	c) Mg	d) Hg
117. Limit of BOD prescrib	ed by Central Pollution Cont	rol Board for the discharge o	f industrial and municipal
waste water into natu	ıral surface water, is		
a) < 3.0 ppm	b) < 10 ppm	c) < 100 ppm	d) < 30 ppm
118. Eutrophication is caus	sed by		
a) Acid rain		b) Nitrates and phosphat	es
c) Sulphates and carb	onates	d) CO ₂ and CO	
119. Examples of regional			
a) Acid rain	b) Smog	c) Both (a) and (b)	d) None of these
	stainable Development (2002		
a) Brazil	b) Sweden	c) Argentina	d) South Africa
•	resents the harmful effect of o		ver?

a) A-petrol, B-diesel, (b) A-diesel, B-petrol, C-42	20%
c) A-petrol, B-diesel, (d) A-diesel, B-petrol, C-45	
124. World environment d			- / 0
a) 1st February	b) 8th March	c) 6th December	d) 5th June
	-		
			Page

125. A lake with nutrients is called		
a) Trophic b) Euphotic	c) Oligotrophic	d) Eutrophic
126. Three mile island and chernobyl disasters are assoc		-
a) Radioactive wastes b) Industrial wastes	c) Municipal wastes	d) Hospital wastes
127. Ozone is spread in the swimming pool because		
a) It acts as disinfectant	b) To absorbs UV radiat	ions
c) Ozone is easily available from O_2	d) All of the above	
128. Which of the following methods are useful for solid	waste disposal?	
I. Open burning		
II. Sanitary landfills		
III. Rag-pickers and kabadiwallahs		
IV. Natural breakdown		
V. Recycling		
VI. Incineration		
Choose the correct option		
a) I, II, III and IV b) I, II, III, IV and V		d) I, II, III, IV, V and VI
129. Checking of re-radiating heat by atmospheric dust		
a) Green house effect b) Solar effect	c) Ozone layer effect	d) Radioactive effect
130. Of the following four metropolitan Indian cities, wh		
a) Mumbai b) Delhi	c) Kolkata	d) Chennai
131. Which of the following are correctly matched?		
I. Arsenic poisoning - Black foot disease		
II. Secondary effluent		
treatment - Biological process		
III. Pyrolysis - Solid soil waste disposal		
IV. <i>Tubifex</i> - Water pollution indicator		
V. Biomagnification - Degradable pollutants		
a) I,II,III and V b) I,III,IV and V	c) II,III,IV and V	d) I,II,III and IV
132. Which of the following is a prime health risks assoc	-	ation through the
atmosphere due to depletion of stratospheric ozon		
a) Damage to digestive system	b) Increased liver cance	
c) Neurological disorder	d) Increased skin cancer	ſ
133. Irrepairable goods, computers and other electronic		
a) a-wastes b) e-wastes	c) c-wastes	d) d-wastes
134. Consider the following statements	1	
I. Reforestation is the process of restoring a forest t	that once existed but was r	emoved at some point of
time in the past	4	
II. Reforestation may occur naturally in a deforeste		1002
III. A tree plantation movement or Van Mahotsava i	is being carried out in India	a since 1982
Which of the statements given above are correct?	a) II and III	
a) I and II b) I and III	c) II and III	d) I, II and III
135. Scrubber is used to remove gases like	a) (()	9) NO
a) CO_2 b) SO_2 126 Consider the following statements shout outrophic	c) CO	d) NO ₂
136. Consider the following statements about eutrophic		
I. Eutrophication is the natural ageing of a water bo II. The accelerated ageing of lakes due to sewage ar		
	iu agricultural and muustr	al wastes is called cultural of
accelerated eutrophication III. The plant nutrients responsible for eutrophicati	on are nitrated and shear	natos
IV. Phosphates and nitrates accelerate the growth of		
water enough to kill the fish and other aquatic anin		n and may deoxygenate the

Which of the statements given above are correct?		
a) I and II b) I, II and III	c) I, III and IV	d) I, II, III and IV
137. A sewage treatment process in which a part of dec		-
the starting of the process is called		
a) Cyclic treatment	b) Activated sludge tre	atment
c) Primary treatment	d) Tertiary treatment	
138. Cigarette smoking causes		
a) Skin cancer b) Blood cancer	c) Bone cancer	d) Lung cancer
139. Ozone saves the biosphere by absorbing the high		
a) Infra-red rays (IR)	b) Ultraviolet rays (UV)
c) X-rays	d) Gamma rays	
140. The fertile top soil is removed by human activities		
a) Over-cultivation	b) Unrestricted grazing	
c) Deforestation and poor irrigation practices	d) All of the above	
141. Which of the following statement is correct?a) Extensive use of chemical fertilizers may lead to	o outrophication of poorby	water bodies
b) Both <i>Azotobacter</i> and <i>Rhizobium</i> fix atmosphere		
c) Cyanobacteria such as <i>Anabaena</i> and <i>Nostoc</i> a	-	-
for plant nutrition in soil		phosphates and potassian
d) At present, it is not possible to grow maize with	out chemical fertilizers	
142. Algal blooms imparts a distinct colour to water du		
a) Their pigments		
b) Excretion of coloured substance		
c) Absorption of light by algal cell wall		
d) Formation of coloured chemicals in water facili	tated by physiological deg	radation of algae
143. Pollution is not caused by		
a) Thermal power plant	b) Automobile	
c) Radioactive power plant	d) Hydroelectric powe	r plant
144. The term 'biomagnification' refers to the		
a) Growth of organisms due to food consumption		
b) Increase in population size		
c) Blowing up of environmental issues by man	bla pollutanta ao thay paga	through food shain
d) Increasing in the concentration of non-degrada 145. Carbon dioxide is called green house gas because		till ougli 1000 cilalii
a) Used in green house to increase plant growth	b) Transparent to heat	hut trans sunlight
c) Transparent to sunlight but traps heat	d) Transparent to both	
146. One of the following acts as secondary pollutant	uj mansparent to both	sumgit und neut
a) Br_2 b) Cl_2	c) NO ₂	d) HNO ₃
147. Which of the following toxic materials was presen		
a) Cd b) Pb	c) Mg	d) Hg
148. Global agreement in specific control strategies to	reduce the release of ozone	e depleting substances, was
adopted by		
a) Rio de Janerio Conference	b) Montreal Protocol	
c) Kyoto Protocol	d) Vienna Convention	
149. Ecological sanitation is a sustainable system for har Such 'Ecosave' toilets are working in	andling human excreta, usi	ng dry composting toilets.
a) Asom and West Bengal	b) Andhra Pradesh and	l Maharashtra
c) Kerala and Sri Lanka	d) Karnataka and Andł	nra Pradesh
150. Common indicator organism of water pollution is		
a) Lemna pancicostata		

b) Eichhornia crassipes				
c) Escherichia coli				
d) Entamoeba histolytica				
151. Kyoto protocol has specified the commitments of d				
a) To mitigate climate changes	b) Limit production of c	hlorofluorocarbons		
c) To prepare a world climate programme	d) None of the above			
152. Which of the following groups of gases cause photo	•			
a) O_3 PAN and CO b) HC, NO and PAN	c) O_2 , PAN and NO_2			
153. The phenomenon by which certain pollutants (<i>e. g.</i>	, DDT, Mercury) accumula	tes in the body tissues in		
increasing concentration is called a) Biological degradation	b) Biological magnificat	ion		
c) Eutrophication	d) Bioprecipitation	1011		
154. Read the following statements carefully and select	· · ·			
I. UV rays essential for the production as well as de				
II. Ozone present in ionosphere acts as a shield abs	• •	g from the sun		
III. One fourth of the incoming solar radiation is ref	-	-		
half of the incoming solar radiation falls on the eart				
reflected back				
a) I and II b) I and III	c) II and III	d) I, II and III		
155. In India, the heaviest demand of forests is for	,			
a) Fuel wood	b) Timber wood			
c) Wood for agricultural tools	d) Medicines			
156. The ultraviolet radiations in the stratosphere are a	bsorbed by			
a) 0 ₃ b) 0 ₂	c) CO ₂	d) H_2SO_4		
157. Carbon monoxide is a pollutant because it				
a) Reacts with O ₂	b) Inhibits glycolysis			
c) Reacts with haemoglobin	d) Makes nervous syste	m inactive		
158. It is estimated that out of the total global warming,	the relative contribution o	$f CO_2$, CH_4 , CFCs and N_2O are		
found respectively as				
a) 60%, 20%, 14% and 6%				
b) 6%, 14%, 20% and 60%				
c) 20%, 60%, 14% and 6%				
d) 20%, 14% ,60% and 6%				
159. In big cities, the major atmospheric pollutant is a) Carbon monoxide and oxide of sulphur	h) Uudno conhon and had	t oin		
c) Pollens and Marsh gas	 b) Hydrocarbon and hot d) Ozone 	t all		
160. Steps taken by the Government of India to control a	,			
a) Compulsory mixing of 20% ethyl alcohol with pe	=	th diesel		
b) Compulsory PUC(Pollution Under Control) certi				
monoxide and hydrocarbons	neution of petion arriven ve			
c) Permission to use only pure diesel with a maxim	um of 500 ppm sulphur as	fuel for vehicles		
d) Use of non-polluting Compressed Natural Gas(Cl				
161. Which of the following plants is used for the purific				
a) <i>Beggiatoa</i> b) <i>Chlorella</i>	c) <i>Spirogyra</i>	d) <i>Eichhornia</i>		
162. Which of the following is non-biodegradable?				
a) Sewage b) DDT	c) Livestock waste	d) Market garbage		
163. Minamata disease was caused due to the consumpt	ion of			
a) Sea food containing lot of cadmium	b) Fish contaminated w	-		
c) Ousters with lot of pesticide	d) Sea food contaminate			
164. Which one among the following is likely to have the	e highest level of DDT depo	osition in its body?		
		- · · · ·		

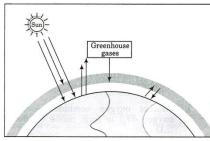

a) Phytoplanktons	b) Sea gull	c) Crab	d) Eel fish	
		n to determine pollution of		
a) Industrial effluent	S	b) Pollen of aquatic pl	ants	
c) Heavy metals		d) Faecal matter		
166. 'Bad' ozone is formed				
a) Atmosphere	b) Ionosphere	c) Stratosphere	d) Troposphere	
167. Which Act was formu	=			
a) The Insecticide Ac		\		
<i>y</i>	ntion and control of pollution	•		
	on and control of pollution)	Act		
d) The Environment		· · · · · · · · · · · · · · · · · · ·		
	he in a column of air from tr	ne ground to the top of the a	itmosphere is measured in	
terms of	h) Deces lunits	a) Gradhang unita	d) Deheen unite	
a) Decibel units	b) Pascal units	c) Svedberg units	d) Dobson units	
169. The Montreal protoco		h) Clobal warming an	d alimata ahanga	
a) Persistent organic	politicants eplete the ozone layer	b) Global warming and d) Biosafety of genetic	cally modified organisms	
170. Green-house effect re	=	uj biosalety of genetic	any mounted organisms	
a) Cooling of earth	b) Trapping of UV ray	vs c) Production of cerea	lls d) Warming of earth	
	lear waste isA at a very	-		
II. At low doses, radia				
	tatement by choosing appro	opriate option for A and B		
a) A-lethal; B-cancer	caterine in by encouning appro	b) A-cancer; B-mutatio	on	
c) A-mutation; B-down syndrome			d) A-down syndrome; B-cancer	
172. A pollutant can best of				
a) Has natural geoch		b) Changes homeostas	sis of environment	
c) Disturb natural flo	-	d) Become stabilized i		
173. Global warming can l	-	-	-	
I. reducing deforestat	tion			
II. planting trees (affo	orestation)			
III. slowing down the	growth of human population	on		
IV. reduction of emiss	sion of greenhouse gases in	to the atmosphere		
V. cutting down the u	se of fossil fuels			
	ent given above are correct?			
a) I, II, III and IV	b) II, III, IV and V	c) I, III, V and IV	d) I, II, IV and V	
174. What is true about th				
		diesel and 150 ppm in petro	ol	
	uce sulphur level to 50 ppn			
	uce sulphur level to 200 pp	=		
		m in diesel and 100 ppm in	-	
=	hich calls for appropriate a	ction to protect the ozone la	ayer from human activities was	
passed in the year			N (005

_	nic and efficient method of		
· · · · · · · · · · · · · · · · · · ·		•	

III. Human excreta	can be recycled into natura	ll fertilisers, to replace chem	nical fertilisers	
a) I and II	b) I and III	c) II and III	d) I, II and III	
210. Which element is caused of itai-itai disease?				

- a) Hg b) Pb c) Cd d) As
- 211. Organic farming is the technique of raising crops through the use ofa) Manureb) Biofertilisersc) Resistant varietiesd) All of these
- 212. Given diagram represents the greenhouse effect

I. Greenhouse gases absorb infrared radiation from the earth. The absorbed radiations again come to earth's surface and heat it up
II. CO₂, CH₄, CFCs and N₂O are the gases which are responsible for greenhouse effect
III. Increase in the level of greenhouse gases results considerable heating of earth leading to global warming
Which of the statement given above are correct?
a) I and II
b) II and III
c) I and III
d) I, II and III

213. Loss of forest, urbanization, increasing pollution are all due to a) Global warming b) Green house effect c) Population explosion d) Ozone depletion 214. Motor vehicles equipped with catalytic converter should use unleaded petrol because lead a) In petrol inactivates the catalyst b) Increases the burning of petrol c) Decreases the efficiency of vehicles d) Is a heavy metal 215. The accelerated ageing of lakes due to sewage and agricultural and industrial waste is called a) Nutrient enrichment b) Accelerated eutrophication d) None of the above c) Biomagnification 216. Which of the following is biodegradable pollutant? a) Sewage b) Plastic c) Polythene d) DDT 217. Eutrophication results in reduction of a) Mineral salts b) Dissolved oxygen c) Parasitic Protozoa d) Dissolved nitrate 218. Which one of the following gases can deplete ozone layer in the upper atmosphere? d) Sulphur dioxide a) Ammonia b) Methane c) Carbon monoxide 219. Arrange the following options in ascending order of their BOD value. I. Sample of highly polluted pond water. II. Sample from unpolluted pond water. III. Distilled water. a) III \rightarrow I \rightarrow II b) II \rightarrow III \rightarrow I c) III \rightarrow II \rightarrow I d) I \rightarrow III \rightarrow II 220. In the treatment of waste water discharge, which treatment stage involves biological treatment? a) Primary treatment b) Secondary treatment c) Tertiary treatment d) Reverse osmosis stage 221. Which of the following is secondary pollutant? a) CO_2 b) SO_2 c) NO_2 d) H_20 222. Increase in toxic concentration from one trophic level to another trophic level is called

- Increase in toxic concentration from one trophic level to another trophic level is called
- a) Ecological toxificationb) Biomagnificationsc) Biocoenosisd) Cytological effect

223. At present, the concentration	on of CO_2 in the atmospheric	ere is about	
	o) 240 ppm	c) 380 ppm	d) 520 ppm
224. Which one of the following		of the two(out of the total	of four) green house gases
that contribute to the total	• •		
a) CFCs 14%, CH ₄ 20% b		c) N ₂ O 6%, CO ₂ 86%	d) CH ₄ 20%, N ₂ O 18%
225. Which of the following is a			
	o) Industrial estate	c) Chimney	d) All of these
226. Which of the following is no	ot as a consequence of glo	bal warming?	
a) Rising sea level			
b) Increased agricultural pr			
c) Worsening health effects			
d) Increased storm frequen

I. O_2 II. SO_x III. NO_x I	=		
a) I and III	b) II and III	c) III and IV	d) II and IV
306. Which act was formulat	ed in the year 1974?		
a) The Water (Prevention	on and Control of Pollution)	Act	
b) The Air (Prevention a	and Control of Pollution) Act	t	
	on and Control of Pollution)	Act	
d) The Environment (Pr			
307. Carbon monoxide cause	S		
I. giddiness			
II. headache III. decreased vision			
IV. Cardiovascular malfu	inction		
V. asphyxia			
	s given above are correct?		
a) I, II and III	b) II, III, IV and V	c) I, III, IV and V	d) I, II, III, IV and V
308. Clearing of waste water	in Arcata Marsh involves		-
a) Only conventional me	ethod of sewage treatment		
b) Removal of dissolved	heavy metals through biolo	gical process	
	ion like chemical processes		
d) Enhance the need for			
309. Which of the following i			
a) NO	b) NO ₂	c) SO ₂	d) PAN

310. When and where the ozo	one hole was discovered?		
	b) 1985, Antarctica	c) 1986, Arctic	d) 1987, Arctic
311. In the phosphorus cycle,			, ,
a) Decomposers	b) Consumers	c) Producers	d) All of these
312. Terracing is done in	-		-
a) Desert areas	b) Hilly areas	c) Dry areas	d) Plain areas
313. High amount of Escheric	chia coli in water indicates		
a) Hardness of water		b) Industrial pollution	
c) Sewage pollution		d) Pollution due to electr	omagnetic radiation
314. Which one of the followi	ng pairs of gases are the ma	ajor cause of 'Green house e	effect'?
a) CO ₂ and CO	b) CFCs and SO ₂	c) CO_2 and N_2O	d) CO_2 and O_3
315. In plants, air pollution ca	auses		
a) Reduced growth and g	yield	b) Leads to premature de	eath
c) Both (a) and (b)		d) Wilting	
316. Recent reports of acid ra	_		ospheric pollution by
,	nd SO ₂ by burning of fossil f		
	y burning of coal /wood cut	ting of forests and increasi	ng populations
-	H_3 by coal gas / industries		
	0 by incomplete combustic	on of carbonaceous fuels	
317. Major cause of air pollut	ion in big cities is		
a) Domestic exhaust		b) Burning of cooking ga	S
c) Thermal power plant		d) Automobile exhaust	
318. Which one of the followi		ise Bhopal gas tragedy?	
a) Thousands of human	-		
b) Radioactive fall out er			
	ght of December 2/3,1984		
d) Methyl isocyanate gas 319. Why ozone is known as '			
a) Because it is formed b			
b) Because it is harmful	-		
	just like weeds for manking	d	
d) Ozone is not designat		u	
320. Consider the following s			
I. Noise causes psycholog			
	gical disorder in humans		
	it is dB but some times it is	measured in Dobson unit	
IV. 150 dB is tolerate for	human		
Which of the above state	ements are true?		
a) I and IV	b) I and II	c) I, II and IV	d) I and III
321. Which of the following g	ases does not cause acid ra	in?	
a) Sulphur dioxide	b) Methane	c) Nitrous oxide	d) Carbon monoxide
322. Electrostatic Precipitato	r (ESP)		
I. Is an electrical device t	o remove particulate matte	er present in the exhaust of	thermal power plant
II. More than 99% partic	ulate matter can be remove	ed by this method	
III. ESP has electrode wi	res and a stage of collecting	plates	
	given above are correct?		
a) I and II	b) I and III	c) II and III	d) I, II and III
323. The pollutants which are	e already present in nature,	but are released in substar	ntial amounts by man are
known as			
a) Qualitative pollutants		b) Degradable pollutants	;

c) Primary pollutan			d) Quantitative pollutants							
324. One of the chief caus	sative factor of desertification	on is								
a) Overgrazing		b) Human developmen	tal activities							
c) Irrigated agricult	ure	d) Population								
325. Which method is us	ed to control pollutants of p	articulate nature?								
a) Solvent recovery	-	b) Thermal oxidisers								
c) Electrostatic prec		d) Scrubber	2							
-	policy of India has recomme	endedA % forest cover for	r the plains andB % for the							
hills										
a) A-33; B-67	b) A-35; B-66	c) A-35; B-65	d) A-33; B-64							
327. SO ₂ pollution is indi	-									
a) Desmodium (gr	•									
b) Sphagnum (mos	ses)									
c) Usnea (lichens)										
d) Cucurbita (climb	-									
328. Hydrogen sulphide										
a) Nausea	b) Eye irritation	c) Throat irritation	d) All of these							
	ng statements regarding de	-								
	environment favours decor	=								
	ate is slower if detritus is ric	ch in chitin and lignin.								
c) Earthworm is a d										
mineralisation	oluble morganic nutrients n	nto the soil horizon as unavai	liable saits is called							
	dootwarrad her									
330. Ozone layer is being	b) NO ₂	c) CFCs	d) Dhotoshomiaal amog							
a) SO_2 331 Consider the followi	ing statement about polyble	-	d) Photochemical smog							
	• • • •	fine powder of recycled mod	ified plastic							
	en mixed with bitumen to la		med plastic							
-		int properties and helps to in	crease the life of road							
-	ents given above are correc									
a) I and II	b) I and III	c) II and III	d) I, II and III							
332. Chipko movement		•)								
•	tially meant for protecting t	rees but now meant for pres	ervation of environment							
including habitat an		1								
0		imalayas in 1973 Shri Sundar	· Lal Bahuguna to prevent							
cutting down of tree										
•	gged trees to prevent their o	cutting by the contractor								
	ents given above are correc									
a) I and II	b) I and III	c) II and III	d) I, II and III							
333. Biochemical Oxygen	Demand (BOD) in a river w	vater								
a) Remains unchang	ged when algal bloom occur	S								
b) Has no relationsh	ip with concentration of ox	ygen in the water								
c) Gives a measure of	of <i>Salmonella</i> in the water									
d) Increase when se	wage gets mixed with river	water								
334. Noise pollution is m	easured in									
a) Decibels	b) Amperes	c) Fathoms	d) Ohm							
	=	-	aj Mahal and Red stone of Red							
-	lcium sulphate which cause									
a) Stone leprosy	b) Stone mosaic	c) Corrosion	d) None of these							
336. Which of the followi	ng is not a device used to co	ontrol a particulate matter?								
			Page 25							

a) Arresters	b) Scrubbers							
c) Filters	d) Incinerator							
337. What was the aim of Chipko movement?								
a) Human rights	b) Political rights							
c) Agricultural expansion	d) Forest (plant)conserva	ation						
338. Which one of the following is a wrong statement?								
a) Greenhouse effect is a natural phenomenon								
b) Eutrophication is a natural phenomenon in freshv	water bodies							
c) Most of the forests have been lost in tropical area	S							
d) Ozone in upper part of atmosphere is harmful to	animals							
339. According to central Pollution Control Board (CPCB)	, which particulate size in	diameter (in micrometres)						
of the air pollutants is responsible for greatest harm	to human health?							
a) 2.5 or less b) 1.5 or less	c) 1.0 or less	d) 5.2 or 2.5						
340. Lichens are described as indicator of								
a) Air pollution								
b) Water pollution								
c) Soil pollution								
d) Agriculture productivity								
341. The two gases making highest relative contribution								
a) CO_2 and CH_4 b) CH_4 and N_2O	c) CFCs and N_2O	d) CO_2 and N_2O						
342. Which of the chemical reaction is not correct?								
a) $CFCl_3 \xrightarrow{UV-C} CFCl_2 + Cl$	b) $CF_2Cl_2 \xrightarrow{UV-C} CF_2Cl Cl$							
c) NO + O ₃ \xrightarrow{hv} NO ₃ + O	d) $NO_2 + O_3 \xrightarrow{hv} NO_3 + O_3$)_						
343. Term used for accumulation of non-degradable poll		-						
al Biomagnification of Elitrophication	c) Biome	d) Ecotone						
a) Biomagnification b) Eutrophication 344. Domestic sewage mainly contains A wastes whic	c) Biome h are readily decomposed i	d) Ecotone with the help ofB Here						
344. Domestic sewage mainly containsA wastes whic	-	-						
344. Domestic sewage mainly containsA wastes whic A and B refers to	h are readily decomposed	with the help ofB Here						
344. Domestic sewage mainly containsA wastes whicA and B refers toa) A-inorganic; B-bacteria	h are readily decomposed b) A-biodegradable; B-de	with the help ofB Here composers						
344. Domestic sewage mainly containsA wastes whic A and B refers to	h are readily decomposed b) A-biodegradable; B-de d) A-Synthetic; B-bacteria	with the help ofB Here composers						
 344. Domestic sewage mainly containsA wastes whice A and B refers to a) A-inorganic; B-bacteria c) A-chemical; B-microorganisms 345. Which insecticide is more hazardous to human health 	h are readily decomposed b) A-biodegradable; B-de d) A-Synthetic; B-bacteria h?	with the help ofB Here composers						
 344. Domestic sewage mainly containsA wastes which A and B refers to a) A-inorganic; B-bacteria c) A-chemical; B-microorganisms 345. Which insecticide is more hazardous to human health a) Rotenone b) Pyrethrum 	h are readily decomposed b) A-biodegradable; B-de d) A-Synthetic; B-bacteria h? c) DDT	with the help ofB Here composers a d) Humulin						
 344. Domestic sewage mainly containsA wastes which A and B refers to a) A-inorganic; B-bacteria c) A-chemical; B-microorganisms 345. Which insecticide is more hazardous to human health a) Rotenone b) Pyrethrum 346. Which of the following statement is/are not correct 	h are readily decomposed b) A-biodegradable; B-de d) A-Synthetic; B-bacteria h? c) DDT regarding biomagnification	with the help ofB Here composers a d) Humulin n?						
 344. Domestic sewage mainly containsA wastes which A and B refers to a) A-inorganic; B-bacteria c) A-chemical; B-microorganisms 345. Which insecticide is more hazardous to human health a) Rotenone b) Pyrethrum 	h are readily decomposed b) A-biodegradable; B-de d) A-Synthetic; B-bacteria h? c) DDT regarding biomagnification ood chain and increases in	with the help ofB Here composers a d) Humulin n?						
 344. Domestic sewage mainly containsA wastes which A and B refers to a) A-inorganic; B-bacteria c) A-chemical; B-microorganisms 345. Which insecticide is more hazardous to human health a) Rotenone b) Pyrethrum 346. Which of the following statement is/are not correct I. Heavy metals and persistent pesticides pass into feed to be a statement of the following statement pesticides and persistent pesticides pass into feed to be a statement of the feed to be a statement pesticide to be a statement of the feed to be a statement pesticide to be a statement of the feed to be a statement of the feed	h are readily decomposed b) A-biodegradable; B-de d) A-Synthetic; B-bacteria h? c) DDT regarding biomagnification ood chain and increases in accumulation in fat	with the help ofB Here composers a d) Humulin n?						
 344. Domestic sewage mainly containsA wastes which A and B refers to A) A-inorganic; B-bacteria C) A-chemical; B-microorganisms 345. Which insecticide is more hazardous to human health a) Rotenone b) Pyrethrum 346. Which of the following statement is/are not correct I. Heavy metals and persistent pesticides pass into for organisms with the rise in trophic level due to their 	h are readily decomposed b) A-biodegradable; B-de d) A-Synthetic; B-bacteria h? c) DDT regarding biomagnification ood chain and increases in accumulation in fat ell in birds	with the help ofB Here composers a d) Humulin n?						
 344. Domestic sewage mainly containsA wastes which A and B refers to a) A-inorganic; B-bacteria c) A-chemical; B-microorganisms 345. Which insecticide is more hazardous to human health a) Rotenone b) Pyrethrum 346. Which of the following statement is/are not correct I. Heavy metals and persistent pesticides pass into for organisms with the rise in trophic level due to their II. Accumulation of zinc can cause thinning of eggshere 	h are readily decomposed b) A-biodegradable; B-de d) A-Synthetic; B-bacteria h? c) DDT regarding biomagnification ood chain and increases in accumulation in fat ell in birds sh-eating birds	with the help ofB Here composers a d) Humulin n?						
 344. Domestic sewage mainly containsA wastes which A and B refers to a) A-inorganic; B-bacteria c) A-chemical; B-microorganisms 345. Which insecticide is more hazardous to human health a) Rotenone b) Pyrethrum 346. Which of the following statement is/are not correct I. Heavy metals and persistent pesticides pass into feorganisms with the rise in trophic level due to their II. Accumulation of zinc can cause thinning of eggshee III. DDT accumulation is a major cause of killing of filling of fill	h are readily decomposed b) A-biodegradable; B-de d) A-Synthetic; B-bacteria h? c) DDT regarding biomagnification ood chain and increases in accumulation in fat ell in birds sh-eating birds	with the help ofB Here composers a d) Humulin n?						
 344. Domestic sewage mainly containsA wastes which A and B refers to A) A-inorganic; B-bacteria C) A-chemical; B-microorganisms 345. Which insecticide is more hazardous to human health a) Rotenone B) Pyrethrum 346. Which of the following statement is/are not correct I. Heavy metals and persistent pesticides pass into for organisms with the rise in trophic level due to their II. Accumulation of zinc can cause thinning of eggsher III. DDT accumulation is a major cause of killing of first IV. Biomagnification occurs only in marine food chait 	h are readily decomposed b) A-biodegradable; B-de d) A-Synthetic; B-bacteria h? c) DDT regarding biomagnification ood chain and increases in accumulation in fat ell in birds sh-eating birds n c) II and IV	with the help ofB Here composers a d) Humulin n? amount per unit weight of d) I and III						
 344. Domestic sewage mainly containsA wastes which A and B refers to a) A-inorganic; B-bacteria c) A-chemical; B-microorganisms 345. Which insecticide is more hazardous to human health a) Rotenone b) Pyrethrum 346. Which of the following statement is/are not correct I. Heavy metals and persistent pesticides pass into feorganisms with the rise in trophic level due to their II. Accumulation of zinc can cause thinning of eggshee III. DDT accumulation is a major cause of killing of fi IV. Biomagnification occurs only in marine food chait a) I and II 	h are readily decomposed b) A-biodegradable; B-de d) A-Synthetic; B-bacteria h? c) DDT regarding biomagnification ood chain and increases in accumulation in fat ell in birds sh-eating birds n c) II and IV Oxygen Demand) of sewag	with the help ofB Here composers a d) Humulin n? amount per unit weight of d) I and III ge (S), distillery effluent						
 344. Domestic sewage mainly containsA wastes which A and B refers to a) A-inorganic; B-bacteria c) A-chemical; B-microorganisms 345. Which insecticide is more hazardous to human health a) Rotenone b) Pyrethrum 346. Which of the following statement is/are not correct I. Heavy metals and persistent pesticides pass into for organisms with the rise in trophic level due to their II. Accumulation of zinc can cause thinning of eggshed III. DDT accumulation is a major cause of killing of fi IV. Biomagnification occurs only in marine food chait a) I and II 347. In which one of the following, the BOD (Biochemical) 	h are readily decomposed b) A-biodegradable; B-de d) A-Synthetic; B-bacteria h? c) DDT regarding biomagnification ood chain and increases in accumulation in fat ell in birds sh-eating birds n c) II and IV Oxygen Demand) of sewag	with the help ofB Here composers a d) Humulin n? amount per unit weight of d) I and III ge (S), distillery effluent						
 344. Domestic sewage mainly containsA wastes which A and B refers to a) A-inorganic; B-bacteria c) A-chemical; B-microorganisms 345. Which insecticide is more hazardous to human healther a) Rotenone b) Pyrethrum 346. Which of the following statement is/are not correct I. Heavy metals and persistent pesticides pass into feorganisms with the rise in trophic level due to their II. Accumulation of zinc can cause thinning of eggshee III. DDT accumulation is a major cause of killing of fi IV. Biomagnification occurs only in marine food chair a) I and II b) II and III 347. In which one of the following, the BOD (Biochemical (DE), paper mill effluent (PE) and sugar mill effluent	h are readily decomposed b) A-biodegradable; B-de d) A-Synthetic; B-bacteria h? c) DDT regarding biomagnification ood chain and increases in accumulation in fat ell in birds sh-eating birds n c) II and IV Oxygen Demand) of sewag t (SE) have been arranged	with the help ofB Here composers a d) Humulin n? amount per unit weight of d) I and III ge (S), distillery effluent						
 344. Domestic sewage mainly containsA wastes which A and B refers to a) A-inorganic; B-bacteria c) A-chemical; B-microorganisms 345. Which insecticide is more hazardous to human healther a) Rotenone b) Pyrethrum 346. Which of the following statement is/are not correct I. Heavy metals and persistent pesticides pass into feorganisms with the rise in trophic level due to their II. Accumulation of zinc can cause thinning of eggsher III. DDT accumulation is a major cause of killing of fi IV. Biomagnification occurs only in marine food chait a) I and II b) II and III 347. In which one of the following, the BOD (Biochemical (DE), paper mill effluent (PE) and sugar mill effluent a) SE < S < PE < DE	 h are readily decomposed in b) A-biodegradable; B-deed) A-Synthetic; B-bacteria c) DDT regarding biomagnification od chain and increases in accumulation in fatell in birds sh-eating birds n c) II and IV Oxygen Demand) of sewaget (SE) have been arranged b) SE < PE < S < DE d) S < DE < PE < SE 	with the help ofB Here composers a d) Humulin n? amount per unit weight of d) I and III ge (S), distillery effluent in ascending order?						
 344. Domestic sewage mainly containsA wastes which A and B refers to A) A-inorganic; B-bacteria C) A-chemical; B-microorganisms 345. Which insecticide is more hazardous to human healther a) Rotenone B) Pyrethrum 346. Which of the following statement is/are not correct I. Heavy metals and persistent pesticides pass into ferroganisms with the rise in trophic level due to their II. Accumulation of zinc can cause thinning of eggsher III. DDT accumulation is a major cause of killing of fir IV. Biomagnification occurs only in marine food chair a) I and II 347. In which one of the following, the BOD (Biochemical (DE), paper mill effluent (PE) and sugar mill effluent a) SE < S < PE < DE C) PE < S < SE < DE 348. Decibel (dB) is a standard abbreviation used for the a) The density of bacteria in a medium 	h are readily decomposed f b) A-biodegradable; B-de d) A-Synthetic; B-bacteria h? c) DDT regarding biomagnification ood chain and increases in accumulation in fat ell in birds sh-eating birds n c) II and IV Oxygen Demand) of sewag t (SE) have been arranged b) SE < PE < S < DE d) S < DE < PE < SE quantitative expression of b) A particular pollutant	with the help ofB Here composers a d) Humulin n? amount per unit weight of d) I and III ge (S), distillery effluent in ascending order?						
 344. Domestic sewage mainly containsA wastes which A and B refers to a) A-inorganic; B-bacteria c) A-chemical; B-microorganisms 345. Which insecticide is more hazardous to human healther a) Rotenone b) Pyrethrum 346. Which of the following statement is/are not correct I. Heavy metals and persistent pesticides pass into ferror organisms with the rise in trophic level due to their II. Accumulation of zinc can cause thinning of eggsher III. DDT accumulation is a major cause of killing of fir IV. Biomagnification occurs only in marine food chaina) I and II 347. In which one of the following, the BOD (Biochemical (DE), paper mill effluent (PE) and sugar mill effluenta) SE < S < PE < DE c) PE < S < SE < DE 348. Decibel (dB) is a standard abbreviation used for the a) The density of bacteria in a medium c) The dominant <i>Bacillus</i> in a culture 	h are readily decomposed f b) A-biodegradable; B-de d) A-Synthetic; B-bacteria c) DDT regarding biomagnification ood chain and increases in accumulation in fat ell in birds sh-eating birds n c) II and IV Oxygen Demand) of sewag t (SE) have been arranged b) SE < PE < S < DE d) S < DE < PE < SE quantitative expression of	with the help ofB Here composers a d) Humulin n? amount per unit weight of d) I and III ge (S), distillery effluent in ascending order?						
 344. Domestic sewage mainly containsA wastes which A and B refers to a) A-inorganic; B-bacteria c) A-chemical; B-microorganisms 345. Which insecticide is more hazardous to human healther a) Rotenone b) Pyrethrum 346. Which of the following statement is/are not correct I. Heavy metals and persistent pesticides pass into fe organisms with the rise in trophic level due to their II. Accumulation of zinc can cause thinning of eggshed III. DDT accumulation is a major cause of killing of fi IV. Biomagnification occurs only in marine food chait a) I and II 347. In which one of the following, the BOD (Biochemical (DE), paper mill effluent (PE) and sugar mill effluent a) SE < S < PE < DE c) PE < S < SE < DE 348. Decibel (dB) is a standard abbreviation used for the a) The density of bacteria in a medium c) The dominant <i>Bacillus</i> in a culture 349. Eutrophication is often seen in 	h are readily decomposed a b) A-biodegradable; B-de d) A-Synthetic; B-bacteria h? c) DDT regarding biomagnification ood chain and increases in accumulation in fat ell in birds sh-eating birds n c) II and IV Oxygen Demand) of sewage t (SE) have been arranged b) SE < PE < S < DE d) S < DE < PE < SE quantitative expression of b) A particular pollutant d) A certain pesticide	with the help ofB Here composers a d) Humulin 1? amount per unit weight of d) I and III ge (S), distillery effluent in ascending order?						
 344. Domestic sewage mainly containsA wastes which A and B refers to a) A-inorganic; B-bacteria c) A-chemical; B-microorganisms 345. Which insecticide is more hazardous to human healther a) Rotenone b) Pyrethrum 346. Which of the following statement is/are not correct I. Heavy metals and persistent pesticides pass into feorganisms with the rise in trophic level due to their II. Accumulation of zinc can cause thinning of eggshed III. DDT accumulation is a major cause of killing of fi IV. Biomagnification occurs only in marine food chair a) I and II b) II and III 347. In which one of the following, the BOD (Biochemical (DE), paper mill effluent (PE) and sugar mill effluen a) SE < S < PE < DE c) PE < S < SE < DE 348. Decibel (dB) is a standard abbreviation used for the a) The density of bacteria in a medium c) The dominant <i>Bacillus</i> in a culture 349. Eutrophication is often seen in a) Fresh water lakes b) Ocean 	h are readily decomposed f b) A-biodegradable; B-de d) A-Synthetic; B-bacteria h? c) DDT regarding biomagnification ood chain and increases in accumulation in fat ell in birds sh-eating birds n c) II and IV Oxygen Demand) of sewag t (SE) have been arranged b) SE < PE < S < DE d) S < DE < PE < SE quantitative expression of b) A particular pollutant	with the help ofB Here composers a d) Humulin n? amount per unit weight of d) I and III ge (S), distillery effluent in ascending order?						
 344. Domestic sewage mainly containsA wastes which A and B refers to a) A-inorganic; B-bacteria c) A-chemical; B-microorganisms 345. Which insecticide is more hazardous to human healther a) Rotenone b) Pyrethrum 346. Which of the following statement is/are not correct I. Heavy metals and persistent pesticides pass into for organisms with the rise in trophic level due to their II. Accumulation of zinc can cause thinning of eggsher III. DDT accumulation is a major cause of killing of fi IV. Biomagnification occurs only in marine food chair a) I and II b) II and III 347. In which one of the following, the BOD (Biochemical (DE), paper mill effluent (PE) and sugar mill effluen a) SE < S < PE < DE c) PE < S < SE < DE 348. Decibel (dB) is a standard abbreviation used for the a) The density of bacteria in a medium c) The dominant <i>Bacillus</i> in a culture 349. Eutrophication is often seen in a) Fresh water lakes b) Ocean 	h are readily decomposed i b) A-biodegradable; B-de d) A-Synthetic; B-bacteria h? c) DDT regarding biomagnification od chain and increases in accumulation in fat ell in birds sh-eating birds n c) II and IV Oxygen Demand) of sewag t (SE) have been arranged b) SE < PE < S < DE d) S < DE < PE < SE quantitative expression of b) A particular pollutant d) A certain pesticide c) Mountains	with the help ofB Here composers a d) Humulin 1? amount per unit weight of d) I and III ge (S), distillery effluent in ascending order?						
 344. Domestic sewage mainly containsA wastes which A and B refers to a) A-inorganic; B-bacteria c) A-chemical; B-microorganisms 345. Which insecticide is more hazardous to human healther a) Rotenone b) Pyrethrum 346. Which of the following statement is/are not correct I. Heavy metals and persistent pesticides pass into feorganisms with the rise in trophic level due to their II. Accumulation of zinc can cause thinning of eggshed III. DDT accumulation is a major cause of killing of fi IV. Biomagnification occurs only in marine food chair a) I and II b) II and III 347. In which one of the following, the BOD (Biochemical (DE), paper mill effluent (PE) and sugar mill effluen a) SE < S < PE < DE c) PE < S < SE < DE 348. Decibel (dB) is a standard abbreviation used for the a) The density of bacteria in a medium c) The dominant <i>Bacillus</i> in a culture 349. Eutrophication is often seen in a) Fresh water lakes b) Ocean 	h are readily decomposed a b) A-biodegradable; B-de d) A-Synthetic; B-bacteria h? c) DDT regarding biomagnification ood chain and increases in accumulation in fat ell in birds sh-eating birds n c) II and IV Oxygen Demand) of sewage t (SE) have been arranged b) SE < PE < S < DE d) S < DE < PE < SE quantitative expression of b) A particular pollutant d) A certain pesticide	with the help ofB Here composers a d) Humulin 1? amount per unit weight of d) I and III ge (S), distillery effluent in ascending order?						

- c) Blue-baby syndrome
- 351. Which of the following is not shortwave radiation?a) X-raysb) Radio waves
- 352. Euro II norms were stipulated to control
 - a) Carbon content b) Sulphur content
- d) Minamata disease

c) Ultra-violet rays d) Cosmic rays

c) Nitrogen content

d) Phosphorus content

NEET BIOLOGY

ENVIRONMENTAL ISSUES

: HINTS AND SOLUTIONS :

7

1 **(a)**

As the exhaust emission passes through catalytic converter, nitric oxide splits into nitrogen and oxygen; carbon monoxide is oxidised to carbon dioxide and unburnt hydrocarbons get burnt completely into CO_2 and H_2O

2 (a)

The National forest Policy (1988) of India has recommended 33% forest cover for the plains and 67% for the hills

3 **(b)**

Green house effect leads to an increase in atmospheric temperature due to $\rm CO_2$ and other gases.

4 **(b)**

Phosphate is a major component of many fertilizers and certain other compounds or chemical, which cause water and soil pollution, while pollens from plants carbon monoxide, hydrocarbons, sulphur dioxide cause air pollution.

5 **(a)**

Many of the pesticides, such as DDT, aldrin and dieldrin are accumulated in the environment. They are fat soluble and generally nonbiodegradable. They get incorporated into the food chain and ultimately deposited in the fatty tissues of animals and humans. In the food chain, because of their build up, they get magnified in the higher trophic levels called biological magnification. The phenomenon of biological magnification is also reported for certain other pollutants such as, heavy metals, e.g. mercury, copper and radioactive substances as strontium-90.

6 **(d)**

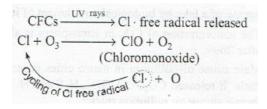

Acid rain results from air pollution by oxides of nitrogen (NO_x) and sulpaur (SO_x) . These gases react with water and form acids.

 $\begin{array}{rrr} \mathrm{SO}_2 &+& \mathrm{H}_2\mathrm{O} &\rightarrow \mathrm{H}_2\mathrm{SO}_3\\ \mathrm{SO}_3 &+& \mathrm{H}_2\mathrm{O} &\rightarrow \mathrm{H}_2\mathrm{SO}_4\\ \mathrm{N}_2\mathrm{O}_5 &+& \mathrm{H}_2\mathrm{O} &\rightarrow \mathrm{2HNO}_3 \end{array}$

When the pH of rain is below 5.6, it is called acid rain.

(a)

CFC_s(Chlorofluorocarbons) are mainly responsible for ozone layer depletion. CFC_s are used as cooling materials in refrigerators and air conditioners, propel aerosol sprays, etc. UV ray breaks *CFC* molecules and release chlorine molecules, which reduce the ozone content in the atmosphere. One chlorine free radical is sufficient to destroy a lac of ozone molecules.

(c)

8

Acid rain is result of SO_2 and NO_2 pollution in atmosphere, SO_2 causes formation of H_2SO_4 and NO_2 causes formation of HNO_3 .Both are strong acids.

9 **(c)**

Noise is defined as undesired high level of sound. It is a physical form of pollution that affects the receiver directly. Noise or pollutant sound has a value of 80 dB and above

10 **(d)**

Eutrophication is the phenomenon of nutrient enrichment of a water body that initially support a dense growth of plants and animal life Extensive increase of these algae is called water bloom. In many cases blooms are formed by bluegreen algae. They are toxic to animals and humans

11 **(d)**

Nuclear waste should be pre-treated and stored in shielded containers and then buried about 500 m deep with in rocks

12 **(a)**

A-bitumen; B-Bengaluru.

A fine powder of recycle modified plastic is called polyblend. Polyblend has been mixed with bitumen to lay roads in Bengaluru. Polyblend enhanced bitumen's water repellant properties and helped to increase the life of road

13 **(b)**

Automobiles burn petroleum inefficiently causing 80% of air pollution and 75% of noise pollution. Automobile exhausts consists of hydrocarbon (13.7%), carbon monoxide (77.2%), nitrogen oxides (7.7%), sulphur oxides, ammonia, aldehydes and lead (90% of total lead poisoning). Lead is present in the form of Pb (CH_3)₄ and (C_2H_5)₄ as anti-knock agent in automobiles exhaust. It interferes with oxygen and glucose metabolism, haeme synthesis and damages the vital organs of body.

14 **(b)**

Green house effect refers to selective energy absorption by CO_2 in the atmosphere which allows short wavelength energy to pass through but absorbs longer wavelength and reflects heat back to earth. It is caused by carbon dioxide, methane, nitrogen dioxide and water vapour.

15 **(d)**

Mainly CO_2 is responsible for the green house effect.

16 **(d)**

Fertile top soil takes hundreds of years to develop. Soil without a vegetation cover is eroded by both wind and water. A sandy patch is formed. Water logging in soil results from irrigation without proper drainage of water. This effects the plants draws salts to the soil surface. The salt is either deposited as a layer on land surface or collects at root of plants. Increased salt concentration damages agriculture

17 **(b)**

A-1981, B-1987, C-noise

18 **(c)**

Electrostatic precipitator is used to remove particulate matter present in the exhaust of thermal power point. They are very efficient devices which remove 99% of particulates of 5-20 μ m size present in the industrial and thermal plant exhausts

19 **(a)**

Reforestation is the natural or intentional restocking of existing forests and woodlands that have been depleted, usually through deforestation

20 **(c)**

A-Compressed Natural Gas (CNG), B-2002, C-Supreme Court

21 **(a)**

 $\rm CFCs$, $\rm CO_2, CH_4, NO_2$ are green house gases. These gases cause increasing in temperature.

22 **(b)**

An ecologically compatible system of disposal of human excreta is the use of dry composting toilets, called ecosave toilets. No water is required. Human excreta is converted into a resource as it forms natural fertilizer. Ecosan toilets are already working in many parts of Kerala and Sri Lanka

23 **(b)**

Kyoto protocol deals with climate changes while Montreal Protocol deals with ozone depletion.

24 **(b)**

 $A-CO_2(60\%), B - CH_4(20\%), C - CFCs(14\%), D - N_2O(6\%)$

25 **(a)**

Main cause of pollution in metro cities is burning of fossil fuels. It released CO_2 , CO, SO_2 , H_2S and H_2SO_4 . All these form a strong air pollution matter.

26 **(a)**

Plant conservation.

The lesson chipko talks about the conservation and importance of trees and forest. Its an ecological movement started by Sunder Lal Bahuguna

27 **(d)**

Electrostatic precipitator (ESP) is the most efficient device to eliminate the submicron particulates from the industrial and then collected on an electrode or hanging pipe. Then these are removed by hanging the pipes with hammers.

28 **(b)**

An international conference was held in Kyoto, the ancient capital of Japan on 1 to 10 December, 1997 of G-77 countries. It is popularly known as Kyoto protocol. In this, emphasis is given on global warming. Later is the result of increasing use of green house gases such as CO_2 , methane, oxides of nitrogen, CFC_s , etc.

29 (a)

Pollution.

Pollution is an undesirable change in physical, chemical or biological characteristics of air, land, water or soil. Agents that bring about such undesirable changes are called as pollutants. Pollution is the unfavorable alteration of our environment largely because of human activities

30 **(b)**

The National Forest Policy (1988) of India has recommended 33% forest cover for the plains and 67% for the hills

31 **(d)**

Desertification is a type of land degradation in which a relatively dry land region becomes increasingly arid, typically losing its bodies of water as well as vegetation and wildlife. It is caused by a variety of factors, such as climate change and human activities

32 **(d)**

Compressed natural gas is a better fuel than40petrol or diesel because it is (i) Cheaper (ii) Burns40more efficiently (iii) Does not produce much90pollution (iv) Cannot of siphoned off by thieves(v) Cannot be adulterated like petrol and diesel

33 **(b)**

Eutrophication is increase in amount of nutrients in water due to detergents, pesticides, etc, and it leads to organic loading, depletion of O_2 , etc. Eutrophicated lake (polluted water) has higher Biochemical Oxygen Demand (BOD), it is the amount of O_2 in mg required to decompose organic matter present in one litre of heavily polluted water.

34 **(c)**

The word 'activated sludge system' is derived from the practice of adding to the incoming sewage of the sludge from a previous batch. This sludge inoculums contains large numbers of metabolizing bacteria, together with yeasts, molds and Protozoa. An especially important ingredient of the sludge are species of *Zoogloea* bacteria, which from flocculent masses (floc) in the aeration tanks. The activity of these aerobic microorganisms oxidizes much of the effluent's organic matter into carbon dioxide and water. When the aeration phase is completed, the floc (secondary sludge) is allowed to settle to the bottom just as the primary sludge settle in primary treatment. Radiations from nuclear wastes cause mutations at a very high rate. A high doses, nuclear radiations are lethal. At low doses, radiations cause disorders and cancer. Nuclear waste should be pretreated and stored in shielded containers and then buried about 500 m deep with in rocks

37 **(a)**

Photochemical smog or oxidizing type of pollution is characterized by the presence of large concentration of ozone, oxides of nitrogen and various hydrocarbons. It occurs in Los Angeles.

38 **(b)**

If there is no greenhouse effect, the average temperature at the surface of earth would have been $-18^\circ \rm C$

39 **(b)**

In Minamata bay of Japan, a disease was caused by eating fish contaminated by industrial waste containing mercury compounds. This disease was called as Minamata disease.

0 **(a)**

The reptiles and birds are mostly secondary or tertiary consumers. The concentration of DDT is increased in them. DDT is non-biodegradable pollutant, responsible for decline in the population of birds and reptiles.

41 **(d)**

Deforestation is the conversion of forested areas to non-forested area. Deforestation generally increases rates of soil erosion. Deforestation and soil erosion causes floods and droughts, as upper layers of soil become vulnerable to water and wind erosion. Deforestation include conversion of forest land to farms, ranches or urban use

42 **(c)**

Biomagnification refers to increase in concentration of the toxicant at successive trophic levels. This happen because a toxic substance accumulated by an organism cannot be metabolized or excreted and is thus, passed on to the next higher trophic level. This phenomenon is well known for mercury and DDT.

43 **(b)**

A-California; B-Humboldt State University

44 **(c)**

In secondary or biological treatment of municipal waste rich in sewage, the organic matter is decomposed with the help of microbes. Decomposition of organic matter occurs by one of the three methods-water hyacinth pond, trickling

35 **(d)**

filter method and activated sludge method. After decomposition the treatment water is sterilized through chlorination.

45 **(d)**

Itai-itai (ouch-ouch disease) is caused by cadmium.

46 **(a)**

Calcium metabolism in birds in disturbed due to the pollution of pesticides which results in thinning of eggshell. This leads to decline in bird population

47 **(d)**

Deforestation can be resulted into increase in carbon dioxide (CO_2) concentration in the atmosphere because trees that could hold a lot of carbon in their biomass are lost with deforestation. Deforestation also causes loss of biodiversity due to habitat destruction, disturbs hydrologic cycle, causes of soil erosion and may lead to desertification in extreme cases

48 **(d)**

Enhance the need for chemical fertilisers. An ecologically compatible system of disposal of human excreta is the use of dry composting toilets, called ecosave toilets. No water is required. Human excreta is converted into a resource as it forms natural fertilizer. Ecosan toilets are already working in many parts of Kerala and Sri Lanka

49 **(b)**

The atmosphere around earth is warmed because molecules in the atmosphere are warmed by radiation from earth and retain that heat

50 **(a)**

Phenyl is not used for disinfection of drinking water.

51 **(b)**

Earth climate is changing as a result of natural and human processes

52 **(c)**

Jhum cultivation, commonly called as slash and burn agriculture in the north eastern states of India, has also contributed to deforestation. In jhum cultivation, the farmers cut down the trees of the forest and burn the plant remains. The ash is used as a fertiliser and the land is then used for farming or cattle grazing. After cultivation, the area is left for several years so as to allow its recovery. The farmers then move on to other areas and repeat this process

53 **(d)**

Oxygen is not a green house gas. The main gases responsible for green house effect are CO_2 , CH_4 , CFC_s and N_2O .

54 **(a)**

Minamata was reported due to mercury (Hg) pollution in Minamata Bay of Japan.

55 **(b)**

In an area where DDT had been used extensively, the population of birds declined significantly because many of the birds eggs laid, did not hatch

56 **(a)**

In 1980, the Government of India has introduced the concept of 'Joint Forest Management (JFM)' to work closely with the local communities for protecting and managing forests on mutual benefits

57 **(c)**

International conference held in **Kyoto, Japan** obtained commitments from different countries for reducing overall green house gas emission at a level 5% below level by 2012.

58 **(a)**

The source of hydrogen sulphides are refineries and chemical industries, bituminous fuels etc. It has smell like rotten eggs. It causes nausea, irritation in eyes and throat.

59 **(d)**

In India, prolonged use of 13-13 ppm of DDT (pesticide) can be detected in the body fat of the people, highest in the world. Most toxic pollutants such as pesticides do not degrade easily and, therefore accumulate within the body of an organism specially in fat deposited portion. This process is known as biochemical concentration.

60 **(c)**

In India the major goal of the green revolution was to increase agricultural production. MS Swaminathan initiated collaboration with Dr. Borlaug which reached the highest point into the green revolution through introduction of Mexican varieties of wheat in India. Green revolution depend mainly on plant breeding techniques for high yielding and disease resistant varieties in wheat, rice, maize etc.

61 **(c)**

Spray of water or lime.

A scrubber can remove gases like sulphur dioxide. In a scrubber, the exhaust is passed through a spray of water or lime

62 **(a)**

Human hear can hear a frequency of 500 to 5000 hertz, , sound energy is measured in terms of units called decibel(dB). Sound in our city homes (silent zone) during day time averages 40-50 dB, but street noise average 70-80 dB. Sounds upto 80 dB are considered bearable by man, but higher sound intensity are hazardous, causing nervous stress, irritability, increased blood pressure, etc.

63 **(a)**

North eastern states of India.

Jhum cultivation, commonly called as slash and burn agriculture in the north eastern states of India, has also contributed to deforestation. In jhum cultivation, the farmers cut down the trees of the forest and burn the plant remains. The ash is used as a fertiliser and the land is then used for farming or cattle grazing. After cultivation, the area is left for several years so as to allow its recovery. The farmers then move on to other areas and repeat this process

64 **(d)**

Pollution is an undesirable change in physical, chemical or biological characteristics of air, land, water or soil. Agents that bring about such undesirable changes are called as pollutants. Pollution is the unfavorable alteration of our environment largely because of human activities

65 **(b)**

Green house gases are those gases, which are transparent to solar radiations but retain and partially reflect back long wave heat radiations, i.e., infra red radiations. The various green house gases are CO₂, CH₄, CFCs, N₂O, O₃ and water vapours.

66 **(b)**

Bacteria is a prokaryotic organism and biodegradable while DDT is a non-biodegradable pollutant and undergo biological magnification.

67 **(a)**

The full form of BOD is **Biochemical Oxygen Demand**.

69 **(a)**

Pollution is an undesirable change in physical,
chemical or biological characteristics of air, land,
water or soil. Agents that bring about such an
undesirable change are called as pollutants. A
pollutant is a chemical geochemical substance as a
biological product that deteriorates our natural
environment. In order to control environmental75

pollution, the government of India has passed the Environment Protection Act, 1986 to protect and improve the quality of our environment (air, water and soil). The air act was amended in 1987 to include noise as air pollution

70 **(d)**

Grazing animals are very harmful because over grazing leads to destruction of vegetation and also cause desertification. The possible beneficial aspect of grazing animals is the addition of their excreta (dung) into the soil, which increases soil fertility.

71 **(d)**

Ozone is formed in the stratosphere by UVradiation through reaction between primary pollutants. Ozone layer of stratosphere protects the earth livings from UV rays (less than 300 mm). Depletion or thining of ozone layer allows harmful UV rays to reach earth and causes skin cancer, cataract, etc.

72 **(d)**

The first effect of noise is anxiety and stress. Noise causes headache by dilating blood vessels of the brain, eye strain by dilating the pupil, etc. It can also cause increase in the rate of heart beat, constriction of blood vessels, decreased heart out put and defective night and colour vision Prolonged and continuous high intensity noise not only causes partial hearing loss but may cause a permanent loss of hearing. A sudden loud noise such as an explosion can damage the tympanic membrane

73 **(a)**

The strength of sensation of sound perceived by the individual is called loudness, which is measured in decibels. The level of audible sound is about 10 dB and of whisper is 10-15 dB and sometimes upto 20 decibel.

74 **(b)**

Organic farming.

Organic farming is a form of agriculture that relies on techniques such as crop rotation, green manure, compost, resistant varieties and biologicals pest control

75 **(d)**

Main components of photochemical smog are ozone, peroxyacetyl nitrate, aldehydes, etc.

(d)

Pesticides are the chemicals that repel or destroy the weeds, pathogens and other pests and thus,

affect the food chain and food web. These chemicals may remain present in soil as pollutants.

77 **(a)**

Acid rain is due to air pollution of oxides of nitrogen (NO_x) and sulphur (SO_x) . Sulphar dioxide (SO_2) reacts with water moisture and forms sulphuric acid, which accounts about 70% of acid rain.

78 **(a)**

According to Central Pollution Control Board (CPCB), particulates size 2.5 micrometers or less in diameter (PM 2.5) are responsible for causing the greatest harm to human health.

These fine particulates can be inhaled deep into the lungs and can cause breathing and respiratory symptoms, irritation inflammations and damage to the lungs and premature deaths. Failure of testosterone secretion causes eunuchoidism

79 **(d)**

Forest wealth suffers loss in many ways

(i) Forest Fires Fire is the worst enemy of forests
(ii) Hydroelectic Projects Dams, barriers
constructed across the streams to form water
reservoirs for generating power or preventing
floods submerge and kill large tracts of forests
(iii) Grazing by Livestock The animals first eat
young plants, then destroy the leaves on the lower
branches of tall trees and finally damage their
trunks and roots

(iv) **Population** Man has cleared large areas of forests to reclaim land for agriculture, housing, factories and roads. Increased demand for timber, fuel wood, **wooden crates** and paper has also contributed to the large scale **felling** of trees

80 **(c)**

Biochemical Oxygen Demand (BOD) is a measure of pollution by organic matter present in a sample of water

BOD is higher in polluted sewage water and is connected with both microbes and organic matter. More the organic pollution, specially sewage, more would be the BOD of water

81 **(c)**

In electrostatic precipitator, electrode wires are provided with an electric current of several thousand volts, which produces a corona that release electron. These electron attach to dust particle and given them a negative charge within a very small fraction of a second

82 **(c)**

Deforestation.

Deforestation is the removal of a forest or stand of trees where the land is thereafter converted to a non-forest use. Examples of deforestation include conversion of forest land to farms, ranches or urban use

83 **(a)**

The gradual continuous increase in average temperature of surface of the earth as a result of increase in concentration of greenhouse gases is termed as global warming

84 **(a)**

80% of automobiles exhaust is carbon monoxide. It is a colorless, odourless gas. When inhaled, this gas combines with blood haemoglobin about 200 times faster than does oxygen and results in oxygen deficiency.

85 **(c)**

Scarps and flyash both.

Solid wastes are discarded solid materials which are produced due to various human activities. Solid wastes can be biodegradable, recyclable or non-biodegradable

Solid wastes can be of the following types (i) **Municipal Solid Waste** Wastes from homes, offices, schools, hospitals etc.

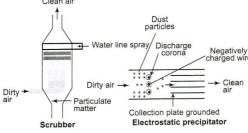

(ii) **Industrial Wastes** The wastes like scraps, flyash, etc., generated by industries

(iii) **Hospital Wastes** Hazardous wastes containing disinfectants and other harmful chemicals generated by hospitals

(iv) **Electronic Wastes** These are the damaged electronic goods and irreparable computers

86 **(c)**

A-Discharge corona, B-Negatively charged wire, C-Dust particle, D-Collection plate grounded.

87 **(c)**

Eichhornia.

Water hyacinth (*Eichhornia crassipes*) also called 'Terror of Bengal' is one such plant that sometimes chokes ponds, lakes and rivers resulting in imbalance of ecosystem dynamics of water-bodies

88

89

(c) Solid waste can be biodegradable, recyclable or non-biodegradable. Solid wastes are discarded solid materials which are produced due to various human activities. Solid wastes can be biodegradable, recyclable or non-biodegradable Solid wastes can be of the following types (i) Municipal Solid Waste Wastes from homes, offices, schools, hospitals etc. (ii) Industrial Wastes The wastes like scraps, flyash, etc., generated by industries (iii) Hospital Wastes Hazardous wastes containing disinfectants and other harmful chemicals generated by hospitals (iv) **Electronic Wastes** These are the damaged electronic goods and irreparable computers (a) Addition of phosphate of nitrate in water or lake firstly affect the growth of organisms. Large algae in presence of nitrate and phosphate growsery fast and occupy a large area As the overload of aquatic organisms increase, the organic remain start depauted at the bottom of lake and over centuary pile up the lake and ultimately converting into land. So eutrophication is natural ageing of lake by nutrient enrichment of its water 90 (c) Many of pesticides such as DDT, aldrin and dieldrin have a long life time in the environment. They are fat soluble and generally nonbiodegradable. They get incorporated into the food chain and ultimately deposited in the fatty tissues of animals and humans. In the food chain, because of their build up, they get magnified at higher trophic level, called biological magnification. 91 (c) The main cause of ozone layer depletion is

chlorofluorocarbons (CFCs) released from aerosol spray cans, polyurethane foams, air conditioners and refrigerators.

92 (c)

A fine powder of recycle modified plastic is called polyblend. Polyblend has been mixed with bitumen to lay roads in Bengaluru. Polyblend

enhance bitumen's water repellant properties and helps in increase the life of road

93 (c)

Stratosphere extends from 16 to 50 km. Temperature shows a gradual increase with increase in altitude. It includes much of ozone laver.

94 (d)

Fine particulates can be inhaled deep into the lungs and can cause breathing and respiratory symptoms, irritation, inflammations and damage to the lungs and premature deaths. failure of testosterone secretion causes eunuchoidism

95 (a)

Electronic waste.

Solid wastes are discarded solid materials which are produced due to various human activities. Solid wastes can be biodegradable, recyclable or non-biodegradable

Solid wastes can be of the following types (i) Municipal Solid Waste Wastes from homes, offices, schools, hospitals etc.

(ii) Industrial Wastes The wastes like scraps, flyash, etc., generated by industries

(iii) Hospital Wastes Hazardous wastes containing disinfectants and other harmful chemicals generated by hospitals

(iv) **Electronic Wastes** These are the damaged electronic goods and irreparable computers

96 (a)

Eutrophication is excessive growth of algae, plants and animals in water-bodies due to nutrient enrichment particularly with nitrogen and phosphorus

97 (a)

Chlorofluorocarbons.

Ozone protects us from the harmful UV radiations from the sun. Major pollutants responsible for the depletion of ozone layer are chlorofluorocarbons, nitrogen oxides and hydrocarbons CFCs are widely used as coolants in air conditioners and refrigerators, cleaning solvents, aerosol propellants and in foam insulation. The threat to O_3 is mainly from CFCs, which are known to deplete 0_3 by 14% at the current emission rate

98 (c)

Chipko Movement was started in Garhwal, Himalayas in 1974 by Shri Sundar Lal Bahuguna to prevent cutting down of trees. Local woman

hugged trees to prevent their cutting by the contractors

99 (d)

In presence of ultraviolet radiation, atomic oxygen reacts with oxygen molecule to form ozone

 $0_2 + 0 \rightarrow 0_3$

100 (a)

Ozone layer is present in stratosphere of atmosphere. Ozone layer is being destroyed by release of many substances such as CFCs, methane, etc. In 1975, atmospheric scientists first discovered the formation of ozone hole maximum over Antarctica.

102 **(b)**

Ozone depletion is occurring widely in the strotasphere, the depletion is particularly marked 111 (a) over the Antarctic region. This has resulted in formation of a large area of thinned ozone layer, commonly called as ozone hole

103 (a)

Prolonged intake of fluoride polluted water causes stiffing of bone and joints particularly spinal cord. Due to affinity with calcium, fluoride stores in bones which causes mottling of teeth, bone pains and outward bending of kegs from the knees. This is known as Knock Knee Syndrome.

104 (a)

Sundar Lal Bahuguna.

Chipko Movement was started in Garhwal, Himalayas in 1974 by Shri Sundar Lal Bahuguna to prevent cutting down of trees. Local woman hugged trees to prevent their cutting by the contractors

105 (d)

The most common type of aerobic bioreactors in use today is the stirred-tank reactor, which may feature a specific internal configuration designed to provide a specific circulation pattern. The stirred-tank bioreactor have been designed for availability of oxygen throughout the process.

106 (a)

They were all radioactive disasters

107 (a)

DDT, BHC, PCBs, etc are non-biodegradable pollutants, which are not degraded easily and are long lasting in the environment.

108 (a)

Catalytic converters are fitted into automobiles for reducing emission of poisonous gases like NO₂ and CO. They have expensive metals like platinum-palladium and rhodium as catalysts

109 (a)

In 1731, a Bishnoi woman, Amrita Devi showed exemplary courage by hugging a tree to prevent its cutting. Government of India has recently instituted the Amrita Devi Bishnoi Wildlife Protection Award for individuals or communities from rural areas that have shown extraordinary courage and dedication in protecting wildlife

110 (a)

Lichens are extremely sensitive to pollutants in the atmosphere and thus, they can be used as bioindicator of air quality. Their sensitively results from their ability to absorb substances dissolved in rain and dew.

Combined biological and enzymatic treatment are used to remove phenol Chydrocarbony. Tyrosinase extraxted from mushroom Agaricus *bisporus* was used in the removal.

112 (a)

Urbanization is the major cause of disertification 113 (b)

One of most appreciated air pollution cleaner system, ESP is widely used in various industries. It is applicable to pollutants particulate matter and hazardous air pollutants such as most metals. Wet ESPs are often used to control acid mists and can provide incidental control of volatile organic compounds.

114 (c)

Lichens are sensitive to SO₂environment. They cannot grow in sulphur dioxide polluted area. So, lichens are called pollution indicating plants.

115 (d)

Reforestation is an inexpensive but slow process for flood control. Reforestation improve soil fertility and reduce soil erosion

116 (b)

Mn causes sterility, eye disease, loss of memory or loss of vision in human beings.

117 (b)

The Central Pollution Control Board prescribed the BOD limit for the discharge of industrial and municipal waste water as < 10 ppm.

118 (b)

Eutrophication is the excessive nutrient enrichment of a water body. It is caused due to the addition of domestic sewage, phosphates, nitrate, etc.

119 (c)

Acid rain and smog are example of regional pollution.

Acid rain is caused mainly by oxides of sulphur and nitrogen and has a pH of 4 or 4.5. once in the air these oxides may react with moisture to form H_2SO_4 and HNO_3 .

 SO_2 (oxidized) $\rightarrow SO_3 + H_2O \rightarrow H_2SO_4$ NO(oxidized) \rightarrow NO₂ + H₂O \rightarrow HNO₃ Smog is harmful mixture of smoke and fog. It consists of mixture of primary and secondary pollutants (eg. Hydrocarbons, NO₂, PAN, HCHO).

120 **(b)**

In 1992, world leaders convened an Earth Summit in Rio de Janeiro, Brazil, in search of international agreements that could help to save the world from pollution, poverty and the waste of resources. Another Earth Summit was convened from 26th August to 4th September 2002 in Johannesburg, South Africa.

121 (c)

Depletion or thining of ozone layer allows harmful 130 (b) UV rays to reach earth and causes skin ageing, skin cancer, cataract, etc.

122 (a)

Ozone hole is not an actual hole but an area of extreme reduction in ozone concentration in the ozone layer in stratosphere

123 **(b)**

A-diesel, B-petrol, C-42%

124 (d)

World environment day is celebrated on 5th June 125 (d)

A lake highly enriched with nutrients is called eutrophic.

126 (a)

Radioactive wastes.

Nuclear energy was assumed to be a natural, nonpolluting way of electricity generation till the incidents at Three Mile Island and Chernobyl. It is now considered as the most potent pollutant Leakage of radioactive materials from thermal power plants and unsafe disposal of radioactive wastes are the main causes of radioactive pollution

128 (d)

Methods of Solid Waste Disposal

(i) **Open Burning** Municipal waste is reduced by burning in open dumps but the unburnt waste serve as the breeding ground for rats and flies (ii) **Sanitary Landfills** Wastes are dumped in a depression or trench after compaction and covered with dirt. Seepage of chemicals from these landfills can pollute underground water resources

(iii) Rag-pickers and Kabadiwallahs Wastes are collected and separated out into reusable or recyclable categories

(iv) Natural Breakdown The biodegradable materials are kept into deep pits in the ground for natural breakdown

(v) Recycling E-wastes can be recycled in specifically built facilities or manually to recover important metals

(vi) Incineration Majority of e-wastes generated in developed world is exported to developing world where they are incinerated

129 (a)

The main gases responsible for green house effect are CO_2 , CH_4 , CFCs, O_3 , etc.

In Delhi, polluted air hangs above like a cloud.

131 (d)

Biomagnification or biological amplification is the passing of non-degradable pollutants like pesticides (DDT), etc, into the food chain and increase in amount per unit weight of organisms with the rise in trophic level due to accumulation in the body.

132 (d)

Increasing skin cancer and damages DNA and proteins in living organisms are the result of ozone depletion

133 (b)

Electronic waste (e-waste) describes loosely, discarded surplus, obsolete or broken electrical or electronic devices. Environmental groups claim that the informal processing of e-waste in developing countries cause serious health and pollution problems.

134 (a)

Reforestation is restoring a forest cover over an area where one existed earlier but was removed at some point of time in the past. It may occur naturally in a deforested area.

A tree plantation movement or Van Mahotsava is being carried out in India since 1950. Under this

movement, both government and private agencies perform tree plantation during July and February every year. In these months soil has sufficient water to support the growth of plant

135 **(b)**

SO₂.

A scrubber can remove gases like sulphur dioxide. In a scrubber, the exhaust is passed through a spray of water or lime

136 **(d)**

Eutrophication is excessive growth of algae, plants and animals in water-bodies due to the nutrient enrichment particularly with nitrogen and phosphorous. Eutrophication is both natural and accelerated. Natural eutrophication is nutrient enrichment of a water-body due to natural ageing

Accelerated eutrophication is nutrient enrichment of water-bodies plants and due to human activities like passage of sewage, industrial effluents and run off from fertilised fields rich in nitrates and phosphates. Nutrients present in sewage, agriculture wastes and fertilisers cause dense growth of plants and planktonic algae. These are toxic to animals and humans

137 **(b)**

The activated sludge treatment involves the decomposition of organic matter through sewage fungus and decomposer bacteria by aeration in oxidation tanks. This aeration helps in the oxidation of sludge.

138 (d)

Carcinogen	Cancer tissue
------------	----------------------

Cigarette smoke - lungs

Soot, coal tar - Skin

Leukamemia is blood cancer resulted due to unchecked proliferation of White Blood Cells(WBCs).

139 **(b)**

Ozone (O_3) is a gas, which is present as a layer in the stratosphere. It absorbs the high energy radiations or ultra violet (UV) rays from sun and protects us from the harmful effects of these radiations.

140 **(d)**

Over cultivation, unrestricted grazing deforestation and poor irrigation practices.

Soil erosion occurs when the soil is blown away by the wind or washed away by the rain. Human play a major role in soil erosion through their use and abuse of natural resources, for example deforestation, grazing, faulty farming systems, high crop intensity, housing construction by cutting plant mining, etc.

141 **(a)**

Eutrophication is a natural state in many lakes and ponds, which have a rich supply of nutrients. Generally, it occurs due to excessive use of chemical fertilizers and causes foul smell of water and death of aquatic organisms.

142 **(a)**

Algal blooms impart a distinct colour to water due to their pigments

143 **(b)**

Hydroelectric power plants do not cause pollution. The **thermal power plants** and **automobiles** cause air pollution. The chief pollutants of thermal power plants are fly ash, So₂, hydrocarbons and other gases while the pollutants of automobiles are CO hydrocarbons, SPM and other gases.

144 **(d)**

The phenomenon of increasing concentration of harmful substances inside the body of organism at successive trophic level is known as **biomagnification**. The pesticides, DDT, inorganic nitrate and non-degradable pollutants enter into the body of plants and animals through food chain.

145 **(c)**

The excess of amount of CO_2 forms a thick 'blanket' in the atmosphere which is transparent to sunlight but absorbs infra-red radiation trapping heat near the earth's surface. In this way, due to CO_2 blanket, the earth's atmosphere works very much like a green house which causes warming up of the interior. So, carbon dioxide is called green house gas.

146 **(b)**

Primary pollutants are the pollutants which enter the air directly from the source, e.g., NO₂, Br₂, Cl₂, CO, DDT, etc.

Secondary pollutants develop from the interaction of primary pollutants and atmosphere constituents, e.g., oxides of nitrogen react with atmospheric moisture (water vapour) and from HNO₃ which results in acid rain.

147 (d)

Minamata bay of Japan was polluted by mercury (Hg), which resulted into Minamata disease.

148 **(b)**

The Montreal protocol on substances that deplete the ozone layer is a landmark international agreement designed to protect the stratospheric ozone layer. The treaty was originally signed in 1987 (effected in 1989) and substantially amended in 1990 and 1992. The Montreal protocol stipulates that the production and consumption of compounds that deplete ozone in the stratosphere-chlorofluorocarbons (CFC_s), halons, carbon tetrachloride and methyl chloroform-are to be phased out by 2000(2005 for methyl chloroform).

149 **(c)**

Kerala and Sri Lanka.

An ecologically compatible system of disposal of human excreta is the use of dry composting toilets, called ecosave toilets. No water is required. Human excreta is converted into a resource as it forms natural fertilizer. Ecosan toilets are already working in many parts of Kerala and Sri Lanka

150 **(c)**

Since, large populations of *Escherichia coli* are found in human colon, the presence of E. coli in water indicates that, it has been contaminated with faecal matter. Thus, E. *coli* is commonly known as indicator of water pollution.

151 (a)

Kyoto protocol has specified the commitments of different countries to mitigate climate changes.

152 **(c)**

 $\rm O_3,$ PAN (Peroxy Acetyl Nitrate) and $\rm NO_2$ are responsible for photochemical smog.

153 **(b)**

Many pesticides, such as DDT, aldrin and dieldrin, have a long life time in the environment. They are fat soluble and generally non-biodegradable. They get incorporated into the food chain and ultimately gets deposited in the fatty tissues of animals and humans

In the food chain, because of their build up, they get magnified in the higher trophic levels called biological magnification. The phenomenon of biological magnification is also reported for certain other pollutants, such as heavy metals like lead, mercury and copper and radioactive substances as strontium-90

154 **(b)**

All of the given statements are correct except II Ozone present in stratosphere acts as a shield absorbing UV radiation coming from the sun

155 **(a)**

In India, the heaviest demand on forests is for fuel wood

156 **(a)**

Ozone layer is confined to the stratosphere. It is formed when sunlight reacts with O_2 molecules. The ozone protects the earth from harmful UV-rays by absorbing them.

157 **(c)**

Carbon monoxide is a pollutant. It is a poisonous gas. Hb has maximum affinity for CO.

158 **(a)**

The rise in concentration of green house gases resulting in increasing the global mean temperature. It is called global warming. The various green gases are CO_2 (warming effect 60%),CH₄(effect 20%),chlorofluorocarbons (effect 14%) and nitrogen oxide (effect 6%).

159 **(a)**

CO and oxides of sulphur from automobiles exhaust and smoke from factories is the main cause of pollution in big cities.

160 **(d)**

Air pollution problem in India become so serious that a public interest litigation (PIL) was filed in the supreme court. Under its directives, the government was asked to take appropriate measures including switching over the entire fleet of public transport from diesel to **compressed natural gas** (CNG).

161 **(d)**

Eichhornia and certain phytoplanktons have capacity of purification of water. Cells of these plants uptake and accumulate heavy metals and other toxicants of polluted water. Organic pollutants of water like petroleum can be degraded with the help of bacteria *Pseudomonas*. *Beggiatoa* is a sulphur bacteria which oxidizes hydrogen sulphide to sulphar.

Chlorella and *Spirogyra* are green algae, which do not help in purification of water.

162 **(b)**

The materials and poison such as aluminium ions, mercurial salts and DDT that either do not

degrade or degrade only extremely slowly in the natural environment are called **non-biodegradable** pollutants.

163 **(b)**

Mercury was responsible for the Minamata epidemic that caused several deaths in Japan. This tragedy had occurred due to consumption of heavily mercury contaminated fish (27 to 102 ppm) by the villagers.

164 **(b)**

The increase in the concentration of a nonbiodegradable pollutant through successive trophic levels is called **biological magnification**. Sea gull is the top consumer in the food chain therefore, highest concentration of DDT will be deposited in it. Phytoplanktons are producers in the water bodies therefore, they have least concentration of DDT.

165 (d)

E.coli resides in the large intestine of human. Therefore, if these are present in water supply, it can be guessed that water supply has been contaminated by sewage.

166 (d)

Bad ozone is formed in troposphere. It is harmful to plants and animals. Good ozone is formed in stratosphere and absorbs harmful UV radiation from the sun

168 (d)

The thickness of the ozone in a column of air form the ground to the top of the atmosphere is measured in terms of Dobson Units (DU).

169 (c)

Montreal protocol refers to the substances such as 177 (c) CFCs, (chlorofluorocarbons), methane that deplete the ozone layer.

170 (d)

Green house effect is the warming up of earth due to accumulation of green house gases. Green house gases mainly include carbon dioxide(CO_2), methane (CH₄), chlorofluorocarbons (CFCs), etc.

171 (a)

Radiations from nuclear wastes cause mutations at a very high rate. At high doses, nuclear radiations are lethal. At low doses, radiations cause disorders and cancer

172 **(b)**

Pollutant is any substance, chemical or factor, which has a potential to harmfully affect the

human being, plants and other animals and therefore, the homeostasis of environment.

173 (d)

Increase in the level of greenhouse gases in the atmosphere causes the rise in global mean temperature called global warming. *Strategies for* reducing global warming are

(i) Reducing deforestation

(ii) Plantation

(iii) Reduction of emission of greenhouse gases into the atmosphere

(iv) Cutting down the use of fossil fuels

174 (a)

Euro II norms were stipulated to control sulphur content at 350 ppm in diesel and 150 ppm in petrol and aromatic hydrocarbons are to be contained at 42%

175 (b)

In 1987, twenty seven industrialized countries signed the Montreal protocol for reduction and release of CFCs(chlorofluorocarbons) depleting ozone layer, into the atmosphere. It was followed by increasingly stringent amendments in London in 1990 and in Copenhagen in 1992.

176 (d)

A scrubber can remove gases like sulphur dioxide. In wet scrubber, a fine spray of water or alkaline fluid like lime is allowed to fall over exhaust emissions. Water dissolves gases. The particles also become heavy and fall down. Lime reacts with sulphur dioxide to produce a precipitate of calcium sulphate or calcium sulphide is used to remove soluble gases and particles

 CO_2 is opaque to infra-red rays, which allow entry of radiations in atmosphere but prevents return of heat to space from earth.

178 (a)

Population growth possesses serious threat to the forest. The forest are the basis needs of everyday life as they provide us food, shelter and raw material for other essentialities but these forests are deforested for fulfilling the increasing demands of overpopulation like clearing of forests for agriculture, industries, urban area, etc.

179 (b)

Smog secondary pollutants are formed by reactions amongst the primary pollutants. They are often more harmful than primary pollutants

180 (c)

According to Holmes et al, (1933), USA is responsible for the largest portion of man made contributions to the green house effect (21%), followed by Russia (14%), European countries (14%), India (4%) and the rest of the world (36%)

181 **(c)**

Stratosphere.

Bad ozone is formed in troposphere. It is harmful to plants and animals. Good ozone is formed in stratosphere and absorbs harmful UV radiation from the sun

182 **(b)**

CFC_s, CH₄, N₂O deplete ozone layers in atmosphere.

183 (d)

Platinum-palladium and rhodium. Catalytic converters are fitted into automobiles for reducing emission of poisonous gases like NO_2 and CO. They have expensive metals like platinum-palladium and rhodium as catalysts

184 (a)

El Nino effect is closely associated with global warming. Rise in temperature leads to deleterious changes in the environment and results in odd climatic changes (e.g., El Nino effect)

185 (b)

The environmental Protection Agency (EPA) has set the Maximum Contamination Lavel (MCL) of nitrate for the safety of drinking water. Nitrate levels at or above this level have been known to cause a potentially fatal blood disorder in infants under six months of age called

methaemoglobinemia or blue-baby syndrome, in which there is a reduction in the oxygen carrying capacity of blood.

187 (b)

Deforestation is the removal of a forest or stand of trees where the land is thereafter converted to a non-forest use. Examples of deforestation include conversion of forest land to farms, ranches or urban use

188 **(b)**

Noise is the most dangerous pollutant of the environment. The unit of sound level is decibel. In 196 (c) a residential areas, during day time 55 dB of sound (45 dB at night) is permissible through noise pollution control law.

190 (a)

In 1987, under Air Prevention and control of pollution Act, noise was recognised as an air pollutant

191 (c)

'Green house effect' refers to selective energy absorption by green house gases(e.g., carbon dioxide, methane, nitrogen oxide, chlorofluorocarbons and water vapour) in the atmosphere, which allows short wavelength energy to pass through but absorbs longer wavelength and reflect heat back to earth.

192 (a)

SO₂ emitted from Mathura refinery (located about 40 km from Taj Mahal) as well as from foundries, power houses and railway yards get mixed with the atmospheric moisture and get converted into sulphuric acid, which settle down on the exterior of Taj Mahal. It reacts with marble $(CaCO_3)$ leading to corrosion and discolouration of the monument.

193 (a)

An international treaty, Montreal Protocol, was signed at Montreal, Canada, in 1987 to curb the emission of ozone depleting substance. More protocols have been laid down in controlling emission of CFCs

194 (c)

Greenhouse gases are those gases, which are transparent to solar radiation but retain and partially reflect back long wave heat radiations $CFFs, CO_2, CH_4, NO_2$, are greenhouse gases. The phenomenon of keeping the earth warm due to presence of these gases in the atmosphere is called greenhouse effect

195 (b)

The temperature of the earth has increased by 0.6°C in last three decades, which will lead to changes in precipitation patterns. Rise in temperature leads to deleterious changes in environment resulting in odd climatic changes called **El Nino effect**. The rise in temperature will lead to the increased melting of polar ice caps which will cause the rise in sea level and many coastal areas will be submerged

Due to addition of domestic wastes (sewage, phosphates, nitrates, etc) water body become rich in nutrients. With the addition of nutrients, there is stimulated luxuriant growth of algae in water leads to algal blooms. The algal blooms complete

with other aquatic plants for light and photosynthesis. Thus, oxygen level is depleted. Moreover, these blooms also release some toxic chemicals, which kill fish and other animals.

197 (d)

Acid rain problem can be attributed mainly to atmospheric pollutants such as oxides of sulphur and nitrogen. The oxides of sulphur are released from the smoke stacks of coal fired power plants, smelters and other industries. The oxides of nitrogen came from combustion of fuels in automobiles as well as in power plants.

198 **(a)**

Eutrophication is increased in amount of nutrients in water due to detergents, pesticides, etc, and it leads to organic loading, depletion of O_2 , etc.

199 **(d)**

Catalytic converters are fitted into automobiles for reducing emission of poisonous gases like NO₂ and CO. Catalytic converters have costly metals like platinum, palladium and rhodium as catalysts. Exhaust gases first pass through catalytic converter

Hydrocarbons which have been left unburnt are oxidised to produce carbon dioxide and water. Carbon monoxide is also oxidised to form carbon dioxide. However, nitrogen oxide splits up to form nitrogen gas. Auto mobiles fitted with catalytic converter should not use leaded petrol because lead inactivates the catalyst of the converter

200 **(b)**

80 dB.

Noise is defined as undesired high level of sound. It is a physical form of pollution that affects the receiver directly. Noise or pollutant sound has a value of 80 dB and above

201 **(d)**

Acid rain is a liquid pollutant, whereas SO_2 , CO and CO_2 are gaseous pollutants.

202 **(b)**

Soil erosion occurs when the soil is blown away by the wind or washed away by the rain. Human play a major role in soil erosion through their use and abuse of natural resources, for example deforestation, grazing, faulty farming systems, high crop intensity, housing construction by cutting plant mining, etc. Ozone depletion in stratosphere shall result in increased incidence of skin cancer and cataract.

204 **(b)**

The oxygen concentration at the floor of the deep ponds and lakes is very low because of the lesser amount of sunlight.

205 **(d)**

 $\rm CO_2$ is normally not an air pollutant. It is necessary for photosynthesis. Its rise has been due to large scale deforestation and large scale combustion of fossil fuels. When $\rm CO_2$ goes to high concentration, it causes global warming.

206 (a)

In August 1989, 44 countries and EEC ratified the Montreal protocol, which provides a mechanism to review the efficiency of control measures. In a policy statement called Helsinki Declaration, the attending nations agreed to phase out the production and consumption of controlled CFCs as soon as possible but not later than the year 2007. They also agreed to phase out the halons and to control and reduce other Ozone Depleting Substances (ODSs).

207 (d)

Sulphur dioxide causes respiratory tract diseases like asthma, bronchitis, cancer, emphysema, etc.

208 **(a)**

Forests in India according to central Forestry commission (1980) are about 19.4%

209 **(d)**

An ecologically compatible system of disposal of human excreta is the use of dry composting toilets called ecosan toilets. No water is required. Human excreta is converted into a resource as it forms natural fertilizer. Ecosan toilets are already working in many parts of Kerala and Sri Lanka

210 **(c)**

Cadmium (Cd) poisoning leads to itai-itai (ouchouch) disease. Cadmium consumption causes diarrhea, bone deformation, kindly damage, retarded growth, CNS injury etc.

Mercury (Hg) poisoning causes Minamata disease, lead (Pb) consumption cause damage to liver, heat, kidney and reduction haemoglobin formation, while black-foot disease is caused by chronic exposure to arsenic.

211 **(d)**

Organic farming is a form of agriculture that relies on techniques such as crop rotation, green

203 **(d)**

manure, compost, resistant varieties and biologicals pest control

212 **(d)**

The atmosphere cover around the earth acts like glass walls of a greenhouse. It absorbs much of the incoming solar radiation from the sun and reradiates to the earth's surface

However, it prevents the long wave infrared radiation emitted by the earth's surface to escape into the space

Thus, the atmosphere acts a greenhouse, trapping the heat. The gases in the atmosphere most responsible for keeping the earth's surface warm are CO_2 , CH_4 , CFCs and N_2O and water vapours The increase in mean global temperature due to increased concentrations of greenhouse gases is called global warming. A recent survey has revealed 60%, 20%, 14% and 6% of warming effect of CO_2 , CH_4 , CFCs and N_2O respectively

213 **(c)**

Population explosion is the major cause of urbanization, deforestation and increasing pollution.

214 **(a)**

Motor vehicles fitted with catalytic converter should use unleaded petrol as leaded petrol inactivates the catalyst

215 **(b)**

Pollutants like effluents from the industries and sewage speed up this ageing process. This is called accelerated or cultural eutrophication. Hot waste water from electricity-generating units, thermal power plants are important pollutants

216 **(a)**

Biodegradable pollutants are those which can be degraded through microbial action, e.g., sewage, livestock wastes, etc.

217 **(b)**

Eutrophication is the phenomenon of nutrient enrichment of a water body. It initially supports a dense growth of plants and animal life causing algal bloom, which cuts off light from submerged plants. The latter die. This results in the reduction of dissolved oxygen.

218 **(b)**

Ozone is an isotope of oxygen. It exists at a height of about 15-60 km in the middle and upper stratosphere and lower mesosphere. Major pollutant responsible for the depletion of ozone are chlorofluorocarbons (CFCs), nitrogen oxides and hydrocarbons (like **benzene, methane**)

219 **(c)**

Biochemical oxygen demand is the oxygen in milligrams required for five days in one liter of water at 20°C for the microorganisms to metabolise organic waste. BOD increases with increase of pollution.

220 **(b)**

Sewage treatment involves three stages:

- 1. **Primary treatment stage** It removes most of the suspended wastes and includes fragmentation, sedimentation, floatation and filtration.
- 2. **Secondary treatment stage** The sewage is accumulated in aerated tanks, where microorganism decompose the organic matter.
- 3. **Tertiary treatment stage** To remove mineral loads, the sewage undergoes additional filtering and chemical treatment.

Polluted water is purified by reverse osmosis technique which does not involve biological process.

221 **(b)**

When primary air pollutants (gases, particulates) take part in wide range of photochemical reactions, they form secondary pollutants. Important secondary pollutants areSO₂, H₂SO₄ PAN etc.

222 **(b)**

The phenomenon through, which certain pollutants (toxic substances) get accumulated in trophic level and increasing concentrations along the different trophic levels is called biological magnification or ecological magnification.

223 **(c)**

The concentration of CO_2 in atmosphere is above 380 ppm after 2009.

224 **(a)**

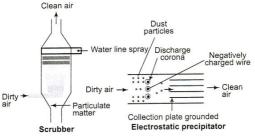

The various green house gases are CO_2 (warming effect 60%), $CH_4(20\%)$, $CFC_s(14\%)$ and nitrous oxide $N_2O(6\%)$.

225 (a)

Chimney is a main source of pollution where pollutants are released from a single point. Mining areas and industrial estate are area source of pollution

227 (b)

A-Dirty air, B-Clean air, C-Water line spray, D-Particulate matter

228 (d)

Bhopal gas tragedy occurred (3 Dec, 1984) when MIC (Methyl Isocyanate) reacted with water in tank, an exothermic chemical reaction started and 233 (b) producing a lot of heat. As a result, the safety valve of tank burst because of increasing in pressure. It gave rise to a heavy gas leak which rapidly rank to the ground.

229 (d)

Global warming is the warming/heating up of the earth's atmosphere due to depletion of 'ozone' in the stratosphere. Major pollutants responsible for this depletion are chlorofluoro carbons (CFCs), nitrogen oxides and hydrocarbons.

CFCs are widely used as coolants in air conditioners and refrigerators, cleaning solvents, aerosol propellants and in foam insulation. It is also used in fire extinguishing equipments. On escaping to the stratosphere, it cause depletion or thinning of protective ozone layer. It results in direct and indirect harmful effects leading to temperature changes and rainfull failures on earth.

So, decreasing the use of air conditioners, jet planes, green house gases, etc, or developing the substitutes for CFCs can be able to reduce global warming.

230 (d)

Air pollution has several effects on all living organism and on climate. Diseases like bronchitis, lung cancer and emphysema are caused by air pollution

(i) NO₂ causes bronchitis and lowers the resistance to influenza

(ii) SO₂ obstructs breathing and irritates eyes

(iii) Nitric acid, nitrous acid and sulphuric acid causes respiratory diseases

Air pollutants reduce growth and yield of crops and cause premature death of plants

231 (d)

Incineration is a method for removing gaseous pollutants by burning them to CO_2 , H_2O and interts. This works only for combustible vapours.

232 (b)

The ozone layer lies in the stratosphere between 20-26 km above the sea level. The chlorofluorocarbons produce active chlorine radicals in the presence of UV radiation. These active chlorine radicals catalytically destroy ozone layer converting into oxygen. Each chlorine radical can destroy as many as 1000 ozone molecules.

Green house effect involves the heating (warming) up of earth's surface due to increasing amount of CO₂ in the atmosphere as its thick layer prevents the solar heat from being reradiated out of the earth's surface.

234 **(b)**

Entrophication is natural state in many lakes and ponds, which have a rich supply of nutrients, this leads to decomposition of nutrients through bacteria and other decomposers by the process of anaerobic respiration. This causes foul smell.

235 (a)

Due to increase in $\rm CO_2$ concentration, a thick layer of CO₂ is formed, which function as glass panel of a green house that prevent the heat from being reradiated out. This is called green house effect.

236 (b)

5th June is celebrated as world environment day. 237 (b)

Ecological balance is the maintenance of an equilibrium between living and non-living components of an ecosystem. So, the pollution disturbs the ecological balance.

238 (c)

Some sulphates and nitrates can also be formed in photochemical smog due to oxidation of sulphur containing components (SO_2, H_2S) and $NO_x(N_2O_5, NO_2)$ but it does not contain CO_2 . Photochemical smog materials cause damage to plants, human health hazards and corrosion problems.

239 (d)

Minamata disease is caused due to consumption of mercury polluted water.

Mercury consumption mainly affects central nervous system. This results impairment of vision, trembling, hair loss and inability to coordinate.

240 (a)

SO₂ and NO₂produce acidity, as a result of which acid rain occurs.

241 **(b)**

Ozone protects us from the harmful UV radiations from the sun. Major pollutants responsible for the depletion of ozone layer are chlorofluorocarbons, nitrogen oxides and hydrocarbons CFCs are widely used as coolants in air conditioners and refrigerators, cleaning solvents, aerosol propellants and in foam insulation. The threat to 0_3 is mainly from CFCs, which are known to deplete 0_3 by 14% at the current emission rate

242 (d)

The phenomenon of greenhouse effect has resulted in rise of mean atmospheric temperature by 0.6°C in the 20th century. It may further rise to some where between 14°C to 58°C by the year 2100 from the 1990 level. Warming of atmosphere will considerably increase its moisture carrying capacity Since warming of the troposphere, is accompanied by cooling of the stratosphere, patterns of air mass movements will change leading to widespread changes in precipitation patterns, particularly in the regions of middle and

higher latitudes

(i) The global warming will raise the sea level due to the thermal expansion of sea water and melting of glaciers and green land ice sheets

(ii) Global warming will lead to explosive growth of weeds, increased incidence of plant diseases and pest as well as increased basal rate of respiration in plants

243 **(b)**

A scrubber can remove gases like sulphur dioxide. In a scrubber, the exhaust is passed through a spray of water or lime

244 **(b)**

Biochemical Oxygen Demand (BOD) is a measure of pollution by organic matter present in a sample 250 (a) of water.BOD is higher in polluted sewage water and is connected with both microbes and organic

matter. More the organic pollution, specially sewage, more would be the BOD of water.

245 (a)

Industries like petroleum, paper manufacturing, metal extraction and processing, etc., release waste water containing heavy metals like mercury cadmium, copper, lead, etc.

246 (d)

The excess growth of planktonic algae that causes colouration of water is called algal blooms. They are toxic to animals and humans. In some cases, eutrophic water-bodies support excessive growth of floating plants. Water hyacinth (Eichhornia crassipes) also called 'Terror of Bengal' is one such plant that sometimes chokes ponds, lakes and rivers resulting in imbalance of ecosystem dynamics of water-bodies

247 (d)

Integrated organic farming is a cyclical, zerowaste procedure, where waste products from one process are cycled in as nutrients for other processes. This allows the maximum utilisation of resource and increases the efficiency of production. Ramesh Chandra Dagar, a farmer in Sonipat, Haryana, is doing just this. He includes bee-keeping, dairy management, water harvesting, composting and agriculture in a chain of processes, which support each other and allow an extremely economical and sustainable venture There is no need to use chemical fertilisers for crops, as cattle excreta (dung) are used as manure. Crop waste is used to create compost, which can be used as a natural fertilizer or can be used to generate natural gas for satisfying the energy needs of the farm. Enthusiastic about spreading information and help on the practice of integrated organic farming. Dagar has created the Haryana Kisan Welfare Club, with a current membership of 5000 farmers

248 (d)

All automobiles and fuel were to have met the Euro III emission specification in eleven Indian cities from 1 April 2005 and have to meet the Euro IV norms by 1 April 2010

249 (a)

In the 1990s, Delhi ranked 4th among the 41 most polluted cities in the world

Water hyacinth (*Eichhornia crassipes*) also called 'Terror of Bengal' is one such plant that

sometimes chokes ponds, lakes and rivers resulting in imbalance of ecosystem dynamics of water-bodies

251 **(c)**

Deforestation can have many impacts including increase rates of soil erosion decrease levels of rainfall and destroys natural habitats of wildlife

252 **(d)**

Protecting wildlife.

In 1731, a Bishnoi woman, Amrita Devi showed **exemplary** courage by hugging a tree to prevent its cutting. Government of India has recently instituted the Amrita Devi Bishnoi Wildlife Protection Award for individuals or communities from rural areas that have shown extraordinary courage and dedication in protecting wildlife

253 **(c)**

Mercury and DDT are well known for biological magnification. Biological magnification is defined as increase in concentration of toxicants at successive tropic levels

254 **(a)**

The emission of exhaust from automobiles which causes **air pollution** can be reduced by devices such as positive crank case ventilation value and **catalytic converter**.

255 **(c)**

DDT has been recently banned because it is nonbiodegradable and biomagnifying pollutant. Biomagnifications means the increase in amount of DDT in the body of organism alongwith the trophic level. Hence, the amount of DDT in first trophic level will be minimum and in top consumer will be maximum.

256 **(c)**

National Environment Engineering Research Institute (NEERI) is situated in **Nagpur**.

257 **(a)**

E-waste are buried in land fills and incinerated 258 (d)

At cellular level, SO_2 pollution destroys all membrane systems. In intense exposure to SO_2 , these is bleaching of leaf pigments due to conversion of chl. – *a* to phaeophytin—*a*. Thus, SO_2 exposure has an impact on plant productivity. SO_2 pollution is the main cause of acid rain, which is threatening the shining of Taj Mahal. Mosses and lichens are very sensitive (indicator) to SO_2 pollution.

259 **(b)**

Catalytic converters are filled into automobiles for reducing emission of poisonous gases like NO_2 and CO. They have expensive metals like platinum-palladium and rhodium as catalyst. As the exhaust emission passes through catalytic converter, nitric oxide splits into nitrogen and oxygen; carbon monoxide is oxidised to carbon dioxide and unburnt hydrocarbons get burnt completely into CO_2 and H_2O . Motor vehicles filled with catalytic converter should use unleaded petrol as leaded petrol inactivates the catalyst

260 **(d)**

Desertification is a type of land degradation in which, a relatively dry land region becomes increasingly arid, typically losing its bodies of water as well as vegetation and wildlife. Desertified area cannot be put to any use. The main cause of desertification is overgrazing, others being soil erosion and deforestation

261 **(c)**

The electrostatic precipitors are installed to control emission of Suspended Particulate Matter (SPM).

262 **(a)**

Minamata is a disease, which is caused by the biomagnifications of heavy metal. It is caused by the excess of mercury. It affects different tissues and physiology.

263 **(d)**

Toxic substances cannot be metabolised or excreted therefore, they get accumulated in an organism and passed onto higher trophic levels. So, if a pond food chain gets polluted by DDT, the tissue concentration of DDT would be highest in bird feeding on fish

264 **(d)**

Jhum cultivation involved felling and burning of forests, followed by cultivation of crops for few years and abandoning cultivation to allow forest regrowth, but the major disadvantages is it lose free diversity of species

265 **(c)**

A brief exposure to extremely high sound level, 150 dB or more generated by take off a jet plane or rocket, may damage eardrums thus permanently impairing hearing ability. If an acidophilic tumour occurs causing high growth hormone secretion after adolescencs it causes acrdmegaly

266	(b)	274	(c)
	Biochemical Oxygen Demand (BOD) is the amount		Stone files are exopterygote insects with aquatic
	of oxygen used for biochemical oxidation by		nymphs, long antennae, biting mouth parts and

279 (a)

Prolonged and continuous high intensity noise not only causes partial hearing loss but may cause a permanent loss of hearing. A sudden loud noise such as an explosion can damage the tympanic membrane. Noise also causes sleeplessness, increased heart beating, altered breathing pattern, thus considerably stressing humans. Silicosis and asbestosis are the common occupational lung disease. These diseases are caused due to chronic exposure of silica and asbestos death

281 (d)

Domestic sewage contains Suspended solid, *e*. *g*., sand, silt and clay Colloidal material, e. g., faecal matter, bacteria, paper and cloth fibres

272 (d)

ozone depletion

blindness cataract

A fine powder of recycle modified plastic is called polyblend. Polyblend has been mixed with bitumen to lay roads in Bengaluru. Polyblend enhanced bitumen's water repellant properties and helped to increase the life of road

UV-rays damages DNA and proteins of living

skin cell damage and skin cancers. UV-rays is

inflammation of cornea. This is called snow-

organisms causing mutation. It causes skin ageing,

absorbed by human eye and at high does it causes

Nuclear waste should be pre-treated and stored in

shielded containers and then buried about 500 m

Page | 48

Dissolved material, e.g., nitrates, ammonia phosphate, sodium, calcium salt

282 (d)

Ultraviolet (UV) light is electromagnetic radiation with a wavelength shorter than that of visible light but longer than X-rays. It is classified as nonionising radiation, and can cause inactivation of protein, pigments and nucleic acids.

283 (a)

UV-A is the least harmful form of UV-radiation having wavelength 320-390 nm. They are allowed 290 (d) to reach the earth surface

284 (c)

Estimating the amount of organic matter in sewage water.

Biochemical Oxygen Demand (BOD) is a measure of pollution by organic matter present in a sample of water

BOD is higher in polluted sewage water and is connected with both microbes and organic matter. More the organic pollution, specially sewage, more would be the BOD of water

285 (a)

Non-degradable pollutants are man-made pollutants, e.g., sewage, pesticides, fertilizers, etc. primary air pollutants are those which enter the air directly from the source, e.g., carbon monoxide. In traffic congested cities, the brown air effect is caused due to oxides of nitrogen.

286 (d)

CFFs, CO_2 , CH_4 , NO_2 are greenhouse gases. The phenomenon of keeping the earth warm due to presence of these gases in the atmosphere is called greenhouse effect

287 (c)

Disappearance of forests.

Deforestation is the removal of a forest or stand of trees where the land is thereafter converted to a non-forest use. Examples of deforestation include conversion of forest land to farms, ranches or urban use

288 **(b)**

The gases responsible for green-house effect are CO_2 , CH_4 , N_2O , CFC_s , etc. the earth's atmosphere with high concentration of green house gases is transparent to incoming short wave solar radiations but absorbs outgoing longwave infrared radiations, particularly earth's thermal radiations (heat-rays), trapping heat near the earth's surface. In this way, the earth's

atmosphere works very much like a green house by warming the interior.

289 (d)

The major sources of air pollution are as follows (i) Transportation

(ii) Use of leaded petrol

(iii) Industrial processes

(iv) Forest fire

- (v) Solid waste disposal
- (vi) Miscellaneous, including radioactive fall out

Photochemical smog is highly oxidizing polluted atmosphere comprising largely of nitrogen oxides (NO_x) , ozone (O_3) , H_2O_2 , organic peroxides and PAN. This is produced as a result of photochemical reaction among primary constituents like nitrogen oxides (NO_x) , hydrocarbons and ozone (0_3) .

291 (b)

Freon and other chlorofluorocarbon (CFC) compounds are used in refrigerators, air conditioners and as filling agent in aerosol, also cause pollution.CFCs do not degrade easily in the troposphere due to which they rise into the stratosphere, where they are broken by UV light. These are mainly responsible for ozone depletion.

292 (c)

Nuclear energy was assumed to be a natural, nonpolluting way of electricity generation till the incidents at Three Mile Island and Chernobyl. It is now considered as the most potent pollutant Leakage of radioactive materials from thermal power plants and unsafe disposal of radioactive wastes are the main causes of radioactive pollution

293 (c)

Slash and burn farming is a form of shifting agriculture where the natural vegetation is cut down and burned as a method of clearing the land for cultivation and then, when the plot becomes infertile, the farmer moves to a new fresh plot and does the same again. This process is repeated over and over

294 (b)

Green House Gas		Percentage
CO ₂	-	57
CH ₄	-	20
CFCs	-	14
N ₂ 0	-	6
Water Vapour	-	5

295	Fly ash is a light airborne particulate matter. Fly ash is mainly produced by coal based thermal plants. It should be removed through wet method		Soil erosion occurs when the soil is blown away by the wind or washed away by the rain. Roots of trees/plants hold the soil. Thus, when more trees are planted their roots don't allow the soil to be
296	and used in building material. Insectivorous plants are plants, which use insects for N_2 requirement, e.g., Drosera. Orchid plants are epiphytic, which grow on other plants for support only.	301	blown or washed away and prevent soil erosion (c) Stoneflies (e.g., <i>Perla sp</i>) belongs to order- Plecoptera of class-Insecta, which has the terrestrial mandibulates. These are not bio- indicators of water pollution.
290	Delhi has the maximum number of vehicles in India. The problem of air pollution was so serious in Delhi. So, the Supreme Court directed the government to take appropriate measure for	302	(b) In India, at the beginning of the twentieth century, forests covered about 30% of land, whereas by the end of the century, it shrunk to 19.4%
	reducing pollution caused by automobiles through (i) Switch over of public transport from diesel/petrol to CNG	303 304	Effect of pollution is observed first on green vegetation.
	(ii) Phasing out of old vehicles(iii) Use of unleaded petrol and reduced sulphur content of diesel	305	Almost 40% forest have been lost in the tropics and 1% forest in the temperate region
	(iv) Fitting the vehicles with catalytic converters(v) Compulsory regular check-up of pollutionemission of vehicles and enforcement of Euro II	505	Peroxyacetylnitrates (PAN) is a secondary pollutant, which is formed by oxides of nitrates and hydrocarbons
297	norms (c) Mathura based petroleum refinery is poisoning	306	(a) The Government of India has passed the water (Prevention and Control of Pollution) Act, 1974,
	threat to Taj Mahal in Agra and other monuments at Fatehpur Sikri complex. Petroleum or oil	307	to safeguard our water resources (d)
	refineries are the major source of gaseous pollutants and the gases released from these are SO_2 and NO_x . NO_x and SO_2 get mixed with atmospheric moisture and form HNO_3 , H_2SO_4 , etc, which react with marble and cause corrosion.		The pollutants that account for most of the air pollution worldwide are called criteria air pollutants, <i>e. g.</i> , carbon monoxide (CO), sulphur dioxide (SO ₂), nitrogen oxides (NO _x), ozone (O ₃), H ₂ S, particulate matters (PM ₁₀) and lead
298	(d) Jhum cultivation or slash and burn agriculture is the farming practice in North-Eastern states of		(i) Carbon monoxide causes giddiness, headache, decreased vision, cardiovascular malfunction and asphyxia
	India. In this process the farmers cut the forest trees and burn the plant remains. The land is then used for farming cattle grazing and the ash is used		(ii) Hydrogen sulphide causes nausea, eye and throat irritation(iii) Sulphur dioxide causes respiratory tract
200	as a fertiliser. After cultivation, the land is left barren for years		diseases like asthma, bronchitis, cancer, emphysema, etc.
299	As we travels along the food chain the concentration of DDT increases	308	 (iv) O₃ is an oxidizing pollutant (b) Cleaning of waste water in Arcata marsh involves
300			removal of dissolved heavy metals through biological process
		309	

310 **(b)**

The depletion of ozone is particularly marked over the Antarctic region in 1985. This has resulted in formation of a large area of thinned ozone layer, commonly called as the ozone hole

311 (c)

In the phosphorus cycle, weathering makes the phosphorus available to soil from where plants or producers get them first.

312 **(b)**

Terrace farming is widely practiced in hilly areas.

313 **(c)**

The presence of *E. coli* bacteria indicates possible sewage contamination of water because *E. coli* is found only in the mammalian intestinal tract including that of humans. *E. coli* bacteria belong to the coliform bacteria group. Coliforms found in mammals are called faecal coliforms. Most coliforms are *E. coli*. So, *E. coli* tests are used as indicator of faecal coliforms

314 **(c)**

The phenomenon of keeping the earth warm due to presence of certain gases in the atmosphere is called green house effect (Fourier,1827).The name is based after a similar warmer interior in glass-enclosed green house where glass panes, CO_2 and water vapour allow the solar radiations to enter but prevent the escape of long wave heat radiations CO_2 and N_2O are the major cause of "green house effect" CO_2 contributes 60% of total global warming , N_2O contributes 6% to green effect.

315 **(c)**

Air pollutants reduces the growth and yield of crops and causes premature death of plants

316 **(a)**

The acid rain is, infact, the cocktail of H_2SO_4 and HNO_3 . The SO_2 and NO_2 produced during the combustion of coal and petroleum reacts with water vapour and formed H_2SO_4 and HNO_3 respectively.

317 **(d)**

The major cause of air pollution in big cities is automobile exhaust. In all major metropolitan cities, vehicular exhaust accounts for 70% of all CO (carbon monoxides), 50% of all hydrocarbons, 30-40% of all oxides and 30 % of all SPM. The vehicular exhaust produces many air pollutants including unburnt hydrocarbons, CO, NO_x and lead oxides along with traces of aldehydes, esters, ethers, peroxides and ketones.

318 **(b)**

Bhopal gas tragedy (Bhopal disaster) the world's worst industrial catastrophes. It occurred on the night of December 2/3,1984 at the Union Carbide India Limited (UCIL) pesticide plant in Bhopal, Madhya Pradesh. A leak of methyl ioscyanate gas and other chemicals from the plant resulted the exposure of hundreds of thousands of people. The official immediate death toll was 2,259 and the government of Madhya Pradesh has confirmed a total of 3,787 deaths related to the gas releases.

319 **(b)**

Good ozone present in stratosphere is useful and bad ozone present in troposphere is harmful for mankind

320 **(b)**

Noise pollution causes psychological and physiological disorder in human noise is only measured in dB unit

321 **(b)**

Acid rain is caused by large scale emission of nitrogen oxides (NO_x) , SO_2 ,volatile organic carbon (VOC_s) , some amount of carbon monoxide and HCI from thermal power plants, industries and automobiles. Methane is a green house gas.

322 **(d)**

Electrostatic precipitator is used to remove particulate matter present in the exhaust of thermal power plant. More than 99% particulate matter can be removed by this method. It has electrode wires that are maintained at several thousand volts which produces a corona that releases electrons

323 (d)

Quantitative pollutants are those substances which are already present in the environment, but are termed as pollutants when their concentration (quantity) increase in the environment, e.g., CO_2 is present on the environment in greater quality than normal.

324 **(b)**

Human development activities. Desertification is a type of land degradation in which a relatively dry land region becomes increasingly arid, typically losing its bodies of water as well as vegetation and wildlife. It is caused by a variety of factors, such as climate change and human activities

325 **(c)**

Electrostatic precipitator.

Electrostatic precipitator is used to remove particulate matter present in the exhaust of thermal power point. They are very efficient devices which remove 99% of particulates of 5-20 μ m size present in the industrial and thermal plant exhausts

326 **(a)**

A-33%; B-67%

327 **(c)**

Lichens (*Usnea*) are the indicator of air pollution, as these are very sensitive to air pollution (particularly SO₂pollution).

328 (d)

Hydrogen sulphide causes nausea, eye and throat irritation

329 **(d)**

Mineralization is the conversion of organic matter into inorganic matter.

330 **(c)**

Ozone protects us from the harmful UV-radiations from the sun. Major pollutants responsible for the depletion of ozone layer are chlorofluorocarbons, nitrogen oxides and hydrocarbons. CFCs are widely used as coolants in air conditioners and refrigerators, cleaning solvents, aerosol propellants and in foam insulation. The threat to O_3 is mainly from CFCs, which are known to deplete O_3 by 14% at the current emission rate.

331 **(d)**

In 1998, Ahmed Khan aged 57 years old, developed polyblend a fine powder of recycled modified plastic in collaboration with RV College of Engineering and the Bengaluru city corporation. Ahmed Khan proved that blends of polyblend and bitumen, when used to lay roads, enhanced the bitumen's water repellant properties and helped to increase the life of road

332 **(d)**

Chipko movement is movement initially meant for protecting trees but now meant for preservation of environment including habitat and wildlife. Chipko movement was born in March 1973 in Gopeshwar in Chamoli district. Finally, Sunder Lal Bahuguna started organized Chipko Andolan in Garhwal Himalayas (Uttarakhand) when in 1974, local women of Advani village in Tehri Garhwal tied sacred thread round the trees to protect them from the axe of contractors by hugging them

333 **(d)**

Biochemical Oxygen Demand (BOD) is the amount of oxygen used for biochemical oxidation by microorganisms in a unit volume of water.
Polluted water has high BOD. Thus when sewage gets mixed with river water, BOD will increase.
334 (a)

Noise pollution is measured in decibels (dB)

335 **(a)**

Stone leprosy is due to SO_2 that forms acid rain. The SO_2 from Mathura refinery is the cause of stone leprosy of Taj Mahal. The Red Fort in Delhi is near old Delhi Railway Station where SO_2 is main pollutant coming from coal burning in Railway yards and trains

336 **(d)**

Incinerator is a device used for destruction of waste material (and not particulate matter) by heat application. Thus, all combustible waste materials are burnt, and reduces their harmful effects.

337 (d)

The lesson chipko talks about the conservation and importance of trees and forest. Its an ecological movement started by Sunder Lal Bahuguna

338 **(d)**

The troposphere is the lowest layer of earth's atmosphere. Bad ozone formed in troposphere and is harmful to plants and animals

339 **(a)**

According to CPCB, air pollutants of size 2.5 or less (in micrometers) diameter are harmful to human health.

340 **(a)**

Distribution of lichen and mosses are the indicator of SO_2 pollution.

341 **(a)**

 $CO_2(60\%)$ and $CH_4(20\%)$ are commonly known as green house gases because they are responsible for the green house effect, also called as global warming.

342 **(c)**

 $NO + O_2 \xrightarrow{hv} NO_2 + O_2$ Nitric oxide (NO) released by jets reacts with ozone to form O_2

343 **(a)**

Biological magnification is the process by which heavy metals and pesticides become more concentrated at higher trophic level of food chain.

Eutrophication is accelerated by introduction of massive amounts of nutrients by human activity.

344 **(b)**

A-Biodegradable; B-Decomposers

345 **(c)**

DDT is the most hazardous, non-biodegradable insecticide, which is fat soluble but insoluble in water. It persists in the environment for a very long period. Being fat soluble, it accumulates in the animal tissues and gets concentrated at different trophic levels of food chain. In each step, DDT, is more concentrated, this called biomagnifications.

346 (c)

Biomagnification is defined as increase in concentration of toxicants at successive trophic levels. Higher amounts of pesticide disturb calcium metabolism of birds resulting in thinning of eggshells. Biomagnification occurs in all aquatic food chain

347 **(b)**

The ascending order of BOD is Sewage (S) < Distillary Effluent (DE) < Paper Mill Effluent (PE) < Sugar Mill Effluent (SE).

348 **(b)**

Noise pollution is a physical form of pollution that affects the receiver directly. dB (decibel) is a standard abbreviation used for the quantitative expression of noise.

349 **(a)**

Eutrophication is nutrient enrichment of water body resulting in increased growth of algae ,other plants and animals. It is often seen in fresh water lakes. Actually it is the natural ageing of a lake by biological enrichment of its water.

350 (d)

Disease	Caused by
Minamata	Mercury
Black foot	Arsenic
Itai-itai	Cadmium
Skeletal fluorosis	Fluoride
Blue-baby syndrome	Nitrate

351 **(b)**

Radio waves are not short wave radiations. These have high wavelength, *i. e.*, 10^3 m.

352 **(b)**

Euro II norms were stipulated to control sulphur content at 350 ppm in diesel and 150 ppm in petrol and aromatic hydrocarbons are to be contained at 42%
